## Preface

The National Institute of Science and Technology Policy (NISTEP) first published in 1991 the 'Science and Technology Indicators' report as a systematic analysis of Japan's science and technology activities based on objective and quantitative data. Since then, NISTEP has published updated editions, each consisting of a revised set of indicators, approximately every three years. As the latest version, the 2004 edition of Science and Technology Indicators (NISTEP REPORT No.73), is released in April, last year in 2004.

On the other hand, it becomes important to collect and update the data continuously by the year even though there is not review of Science and Technology Indicators, because the society, economy, and science and technology in Japan and countries surrounding Japan have accomplished rapid and dynamic change. And also a lot of basic data concerning the science and technology have been updated every year. From such viewpoints, we published the statistics document in twice of May, 2001 and October, 2002 which updated only data of the Science and Technology Indicators ('NISTEP REPORT No. 66-2', 'Research Material-88').

This research material summarized only updated charts as a renewal version of the 2004 edition of Science and Technology Indicators after the official announcement of the report. The number of each chart is matched with the report that comes to easy to refer to the explanation.

We would like to sincerely thank the authors and collaborators of the 2004 edition of Science and Technology Indicators for great cooperation in creating this report, and also gratitude is deeply expressed to the experts in every direction who provided us the data and responded to our inquiries.

We hope that the report will be widely utilized by not only for people engaged in science and technology activity, but for people of broad each class. We will review feedback from parties concerned to further refine and improve future Science and Technology Indicators.

April 2005

Kunio Iijima  
Director of Information Analysis Division  
National Institute of Science and Technology Policy,  
Ministry of Education, Culture, Sports, Science and Technology

(This is an English version of the report published in April 2005)

## Table of Contents

### Reference Statistics

Reference Statistics A: Population for Selected Countries .....	1
Reference Statistics B: Labor Population for Selected Countries.....	2
Reference Statistics C: Gross Domestic Product (GDP) in Selected Countries.....	3
Reference Statistics D: Gross Domestic Product (GDP) Deflator .....	4
Reference Statistics E: Purchasing Power Parity of Selected Countries .....	5

### Part I Global Science and Technology Trends, and the Position of Japan

#### Chapter 1 International Trends in Science and Technology

Figure 1-1-1: Trends in R&D expenditure per GDP for selected countries .....	8
Figure 1-2-1: Increasing international co-authorship of scientific papers:	
Trends in the percentage of internationally co-authored papers in SCI.....	10
Figure 1-2-2: Increasing foreign patent applications Trends in the number of global patent applications .....	11
Figure 1-2-3: Trends in the total value of technology trade for selected 11 OECD countries .....	12
Figure 1-2-4: Trends in the total value of technology trade in selected countries.....	15
Figure 1-2-5: Trends in the total foreign trade in the high technology industries of all OECD countries .....	19
Figure 1-2-6: Trends in the total foreign trade in the high technology industries of all OECD countries:	
A breakdown by industry.....	20
Figure 1-3-1: Change in authorship of papers (Trends in the number of SCI papers by authorship) .....	22
Table 1-1-1: Trends in R&D expenditure per GDP for selected countries.....	9
Table 1-2-1: Increasing international co-authorship of scientific papers:	
Trends in the percentage of internationally co-authored papers in SCI.....	10
Table 1-2-2: Increasing foreign patent applications Trends in the number of global patent applications .....	11
Table 1-2-3: Trends in the total value of technology trade for selected 11 OECD countries.....	13
Table 1-2-4: Trends in the value of technology trade in selected countries .....	16
Table 1-2-5: Trends in the total foreign trade in the high technology industries of all OECD countries .....	19
Table 1-2-6: Trends in the total foreign trade in the high technology industries of all OECD countries:	
A breakdown by industry.....	21
Table 1-3-1: Change in authorship of papers (Trends in the number of SCI papers by authorship).....	23

#### Chapter 2 Performance of Japan's National Innovation System

Figure 2-1-2: Trends in per capita GDP in selected countries .....	26
Figure 2-1-3: Trade balance in the manufacturing sector for selected countries.....	28
Figure 2-1-4: Trade balance in the high technology industry for selected countries.....	30
Figure 2-1-5: Trends in the trade value in the high technology industry for selected countries .....	36
Figure 2-3-1: Trends in the General Indicator of Science and Technology for selected countries .....	40
Figure 2-3-2: Trends in GIST per GDP for selected countries .....	41
Figure 2-3-3: Trends in per capita GIST for selected countries.....	43
Figure 2-3-4: Individual variables' contributions to GIST (2001) .....	44
Figure 2-3-5: Trends in GIST with a breakdown by variable .....	45
Table 2-1-2: Trends in per capita GDP in selected countries.....	27
Table 2-1-3: Trade balance in the manufacturing sector for selected countries .....	29
Table 2-1-4: Trade balance in the high technology industry for selected countries .....	31

Table 2-1-5: Trends in the trade value in the high technology industry for selected countries .....	37
Table 2-3-1: Trends in the General Indicator of Science and Technology for selected countries .....	40
Table 2-3-2: Trends in GIST per GDP for selected countries .....	42
Table 2-3-3: Trends in per capita GIST for selected countries .....	43
Table 2-3-4: Individual variables' contributions to GIST (2001).....	44
Table 2-3-5: Trends in GIST with a breakdown by variable .....	46

## **Part II Knowledge Base, Human Resources and Training**

### **Chapter 3 Human Resources Devoted to Science and Technology in a Knowledge-based Society**

Figure 3-1-1: Trends in the breakdown of Japan's GDP by industry .....	50
Figure 3-1-4: Trends in labor participation rates of 5 nations.....	51
Figure 3-1-5: Growth in the percentage of population in Japan and the United States aged over 25 and with educational attainment of bachelor's degree or higher .....	53
Figure 3-1-6: Trends in the breakdown of work forces in five major countries by industry .....	54
Figure 3-1-7: Trends in the breakdown of workers in Japan by profession .....	56
Figure 3-2-1: Trends in the breakdown of workers in Japan by form of employment .....	57
Figure 3-2-2: Trends in the ratio of temporary workers in the total working populations in five selected countries .....	58
Figure 3-2-3: Trends in the number of years in service with a company in Japan (Total figures for all industries and service industries).....	59
Figure 3-2-4: Trends in the ratio of mid-career recruitment in Japan by profession type.....	61
Figure 3-2-6: Ratio of the Japanese business enterprises adopting merit-based work schemes and flextime work schemes .....	62
Figure 3-2-9: Implementation rates of planned OJT and Off-JT programs at Japanese business enterprises by scale of full-time workforce (FY2002) .....	64
Figure 3-2-12: Growth in the number of working adults in graduate programs in Japan.....	65
Table 3-1-1: Trends in the breakdown of Japan's GDP by industry .....	50
Table 3-1-4: Trends in labor participation rates of 5 nations .....	52
Table 3-1-5: Growth in the percentage of population in Japan and the United States aged over 25 and with educational attainment of bachelor's degree or higher .....	53
Table 3-1-6: Trends in the breakdown of work forces in five major countries by industry .....	54
Table 3-1-7: Trends in the breakdown of workers in Japan by profession.....	56
Table 3-2-1: Trends in the breakdown of workers in Japan by form of employment.....	57
Table 3-2-2: Trends in the ratio of temporary workers in the total working populations in five selected countries .....	58
Table 3-2-3: Trends in the number of years in service with a company in Japan (Total figures for all industries and service industries).....	60
Table 3-2-4: Trends in the ratio of mid-career recruitment in Japan by profession type .....	61
Table 3-2-6: Ratio of the Japanese business enterprises adopting merit-based work schemes and flextime work schemes .....	62
Table 3-2-9: Implementation rates of planned OJT and Off-JT programs at Japanese business enterprises by scale of full-time workforce (FY2002) .....	64
Table 3-2-12: Growth in the number of working adults in graduate programs in Japan .....	65

### **Chapter 4 The Researcher in a knowledge-based society**

Figure 4-1-1: The number of researchers in selected countries .....	68
Figure 4-1-2: Trend in the number of researchers per 10,000 labor force .....	69
Figure 4-1-3: Trends in the number of researchers (1980-2004) .....	70
Figure 4-1-4: Trends in the number of researchers for every 10,000 employees in principal industrial sectors .....	74

Figure 4-1-5: Changes in the number of researchers for every 10,000 employees in leading manufacturing industries (1980-2004).....	75
Figure 4-2-1: Trends in the number and ratio of female researchers .....	76
Figure 4-2-2: International comparison in the ratio of female researchers .....	77
Figure 4-2-4: Rise in the number of foreign researchers and ratio to total number of researchers .....	78
Figure 4-2-5: The breakdown of foreign researchers in Japan by nationality (as of end of 2003) .....	79
Figure 4-2-6: Foreign-born doctorate degree holders in the US in the area of science and engineering (1999).....	80
Figure 4-2-9: Trends in the number of graduates from S&T graduate programs .....	82
Figure 4-2-10: Number of working-adult students in S&T graduate programs and trends in the ratio of such students .....	83
Figure 4-2-11: Trends in ratio of nonworking persons in graduates by type of S&T graduates program.....	84
Figure 4-2-14: Number of new and mid-career researchers recruited (2004).....	86
 Table 4-1-1: The number of researchers in selected countries.....	68
Table 4-1-2: Trend in the number of researchers per 10,000 labor force .....	69
Table 4-1-3: Trends in the number of researchers (1980-2004).....	72
Table 4-1-4: Trends in the number of researchers for every 10,000 employees in principal industrial sectors.....	74
Table 4-1-5: Changes in the number of researchers for every 10,000 employees in leading manufacturing industries (1980-2004) .....	75
Table 4-2-1: Trends in the number and ratio of female researchers .....	76
Table 4-2-2: International comparison in the ratio of female researchers .....	77
Table 4-2-4: Rise in the number of foreign researchers and ratio to total number of researchers .....	78
Table 4-2-5: The breakdown of foreign researchers in Japan by nationality (as of end of 2003) .....	79
Table 4-2-6: Foreign-born doctorate degree holders in the US in the area of science and engineering (1999).....	81
Table 4-2-9: Trends in the number of graduates from S&T graduate programs.....	82
Table 4-2-10: Number of working-adult students in S&T graduate programs and trends in the ratio of such students .....	83
Table 4-2-11: Trends in ratio of nonworking persons in graduates by type of S&T graduates program .....	85
Table 4-2-14: Number of new and mid-career researchers recruited (2004) .....	86

## Chapter 5 Development of Human Resources Devoted to Science and Technology in School Education

Figure 5-0-1: The current state of students in school education (FY2004; conceptual chart) .....	88
Figure 5-1-1: TIMSS-2003 average scores in mathematics .....	89
Figure 5-1-2: TIMSS-R average scores for science .....	90
Figure 5-1-5: Mathematical literacy .....	91
Figure 5-1-6: Scientific literacy .....	92
Figure 5-1-7: Average scores in student assessment and relationship with GDP .....	93
Figure 5-2-1: Trends in the total number of applicants and ratio of successful admission for academic departments at universities .....	94
Figure 5-2-2: Composition ratio of the competition ratio for enrollment and the total number of applicants for academic departments at universities .....	97
Figure 5-2-3: Trends in population of 18-years-old and university enrollments .....	100
Figure 5-2-4: Trends in the number of university enrollments .....	101
Figure 5-2-6: Career paths of university graduates .....	102
Figure 5-2-7: Trends in employment rate of university graduates by industry .....	108
Figure 5-2-8: Trends in employment rate of university graduates by occupation .....	114
Figure 5-3-1: Trends in the number of enrollments by major (master's courses) .....	120
Figure 5-3-2: Trends in the number of enrollments by major (doctorate courses) .....	122
Figure 5-3-3: Trends in advancement rate to graduate schools .....	123
Figure 5-3-4: Trends in employment rate of graduates in master's courses by industry .....	124
Figure 5-3-5: Trends in employment rate of graduates in doctorate courses by industry .....	131

Figure 5-3-6: Trends in the ratio of unemployed to graduates in doctorate courses.....	137
Figure 5-3-7: Trends in employment rate of graduates in master's courses by occupation .....	138
Figure 5-3-8: Trends in employment rate of graduates in doctorate courses by occupation .....	144
Figure 5-4-1: Trends in the number of doctorates conferred .....	150
Figure 5-4-2: Trends in the number of doctorate conferred (by course/by dissertation) .....	152
Figure 5-4-3: International comparison of the number of doctorate recipients per 1 million population .....	154
 Table 5-1-1: TIMSS-2003 average scores in mathematics .....	89
Table 5-1-2: TIMSS-R average scores for science .....	90
Table 5-1-5: Mathematical literacy .....	91
Table 5-1-6: Scientific literacy .....	92
Table 5-1-7: Average scores in student assessment and relationship with GDP .....	93
Table 5-2-1: Trends in the total number of applicants and ratio of successful admission for academic departments at universities .....	95
Table 5-2-2: Composition ratio of the competition ratio for enrollment and the total number of applicants for academic departments at universities .....	98
Table 5-2-3: Trends in population of 18-years-old and university enrollments .....	100
Table 5-2-4: Trends in the number of university enrollments .....	101
Table 5-2-6: Career paths of university graduates .....	103
Table 5-2-7: Trends in employment rate of university graduates by industry .....	109
Table 5-2-8: Trends in employment rate of university graduates by occupation .....	115
Table 5-3-1: Trends in the number of enrollments by major (master's courses) .....	121
Table 5-3-2: Trends in the number of enrollments by major (doctorate courses) .....	122
Table 5-3-3: Trends in advancement rate to graduate schools .....	123
Table 5-3-4: Trends in employment rate of graduates in master's courses by industry .....	125
Table 5-3-5: Trends in employment rate of graduates in doctorate courses by industry .....	132
Table 5-3-6: Trends in the ratio of unemployed to graduates in doctorate courses .....	137
Table 5-3-7: Trends in employment rate of graduates in master's courses by occupation .....	139
Table 5-3-8: Trends in employment rate of graduates in doctorate courses by occupation .....	145
Table 5-4-1: Trends in the number of doctorates conferred .....	151
Table 5-4-2: Trends in the number of doctorate conferred (by course/by dissertation) .....	153
Table 5-4-3: International comparison of the number of doctorate recipients per 1 million population .....	154

## Part III Knowledge Production

### Chapter 6 International Comparison of R&D systems

Figure 6-1-1: Trends in total R&D expenditure for selected countries .....	156
Figure 6-1-3: Trends in R&D expenditure per GDP for selected countries .....	160
Figure 6-1-4: Trend in the number of researchers in selected countries .....	161
Figure 6-1-5: Trends in the number of researchers per capita for selected countries .....	163
Figure 6-1-6: Relative number of researchers by country (Researchers per capita and researchers per working population) .....	164
Figure 6-1-7: R&D expenditure by performing sector and source of funding for selected countries .....	165
Figure 6-1-8: R&D expenditure flow in selected countries .....	169
Figure 6-1-9: Trends in the ratio of R&D expenditure by source of funding and performing sector for selected countries .....	173
Figure 6-1-10: Breakdown of R&D expenditure by performing sector for the EU and China .....	180
Figure 6-1-11: Number of researchers by sector for selected countries .....	182
Figure 6-2-1: R&D expenditure per researcher for selected countries .....	184
Figure 6-2-2: Trends in R&D expenditure per researcher in Japan .....	186
Figure 6-2-3: Breakdown of R&D expenditure by character of work for selected countries .....	187

Figure 6-2-4: Trends in the ratio of basic research expenditure by performing sector for selected countries .....	190
Figure 6-2-5: Number of researchers by field of research and by sector in Japan .....	193
Figure 6-2-6: Research assistants per researcher for selected countries .....	196
Figure 6-2-7: Trends in the number of research assistants per researcher in Japan.....	197
 Table 6-1-1: Trends in total R&D expenditure for selected countries .....	157
Table 6-1-3: Trends in R&D expenditure per GDP for selected countries.....	160
Table 6-1-4: Trend in the number of researchers in selected countries .....	162

Note: a: Break in series with previous year for which data is available.

m: Underestimated or based on underestimated data.

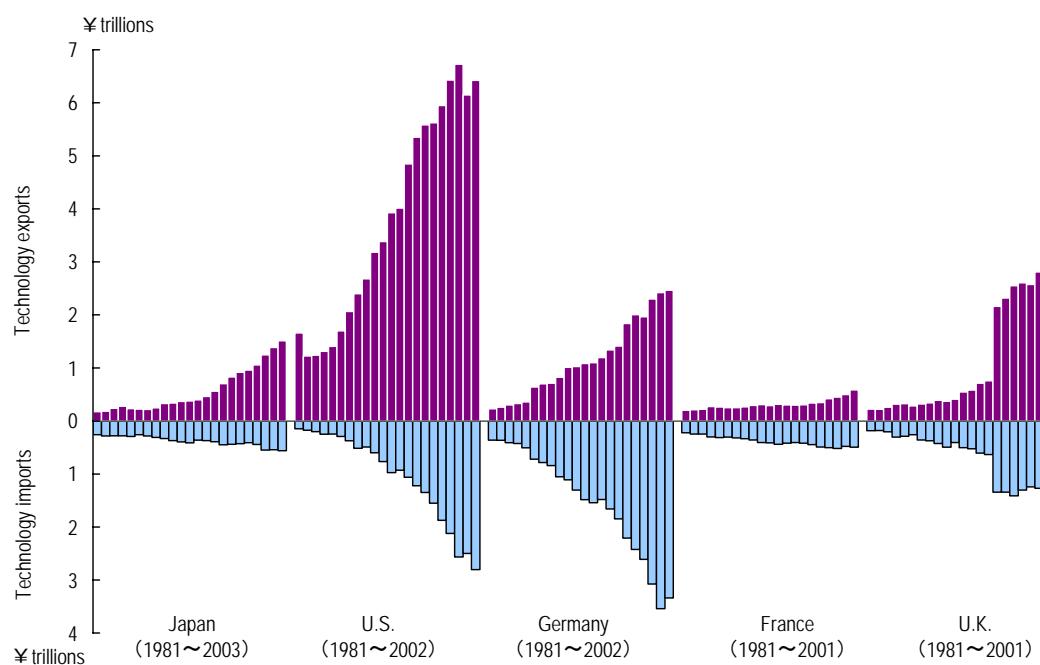

p: Provisional.

Added up export/import values of technological trade of 11 OECD member countries, whose continuous data were available.

These 11 countries are U.S., Japan, Germany, U.K., France, Italy, Canada, Austria, Belgium, Switzerland, and Norway.

Note: a: Break in series with previous year for which data is available.

p:Provisional.

\*:Pre-EMU euro should not be used to form area aggregates or to carry out cross-country comparisons.

Reference Statistics E for purchasing power parity equivalent should be used.

<Japan> Covers patents, expertise, and technical guidance. Data lack continuity in 1996 and 2001 as several industry sectors were added for the survey.

<U.S.>Covers only loyalty and license.

<Germany> West Germany until 1990.Until 1985, it covered patents, licenses, trademarks, and design. After 1986, technical services, computer services, and R&D in industrial sector were included in addition to these.

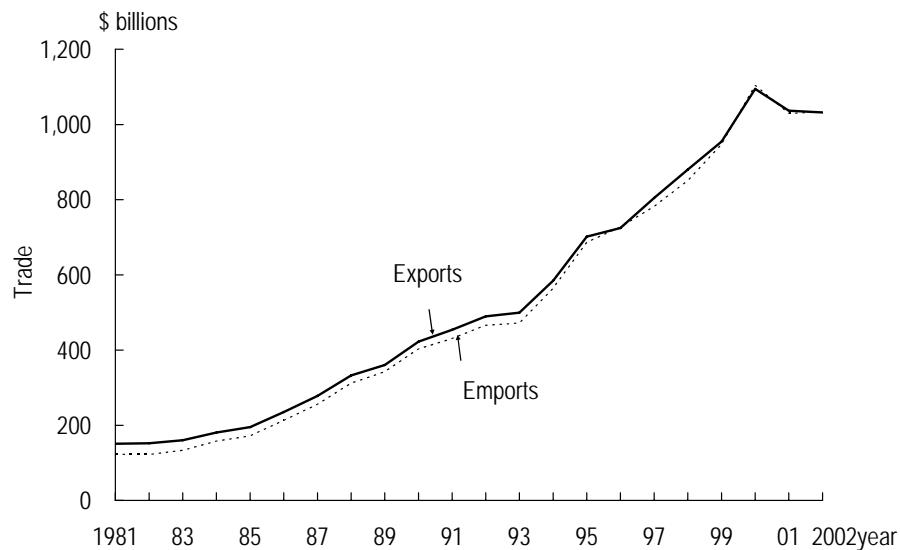

<France> Definition unclear.

<U.K.> Included oil business since 1984. After 1996, included patent, invention, license, trademark, design, technology-related services and R&D.

Note: 1) The above is the 1st-principal component score (eigenvalue = 8.35 contribution rate: 69.6%) obtained by principal component analysis.

(2) A constant (= 1.229) was added to the 1st-principal component to make the first principal component score equal to zero if all the variables are equal to zero.

Source: Calculated by NISTEP based on various data (See Table 2-3-5).

## Definition of variables used in calculation

Number	Variables	Unit	Remarks
[1]	Number of bachelors of science	persons	Number of graduates with a bachelor's degree from a science university
[2]	Number of bachelors of engineering	persons	Number of graduates with a bachelor's degree from an engineering university
[3]	Number of researchers	persons	See Note 2) of Section 6.1.1 (Chapter 1) for the definition of researcher
[4]	R&D expenditure	million dollars	Total expenditure domestically used for R&D. 1995-based real value, purchasing power parity equivalent
[5]	Import value of technology	million dollars	See Section 7.3.1 (Chapter 7) for the definition of import value of technology. 1995-based real value, purchasing power parity equivalent
[6]	Number of scientific papers	number	Number of scientific papers recorded in the SCI database. See Section 7.1 (Chapter 7)
[7]	Times cited of scientific papers	number	Number of times cited of scientific papers recorded in the SCI database. See Section 7.1 (Chapter 7)
[8]	Number of domestic patent applications	number	Number of patent applications filed by applicants to their own country. See Figure 7-2-3 (Chapter 7) for a description
[9]	Number of cross-border patent applications	number	Number of patent applications filed by applicants to foreign countries. See Figure 7-2-3 (Chapter 7) for a description
[10]	Export value of technology	million dollars	See Section 7-3-1 (Chapter 7) for the definition of export value of technology. 1995-based real value, purchasing power parity equivalent
[11]	Added value of industrial products	million dollars	1995-based real value, purchasing power parity equivalent
[12]	Added value of high-tech products	million dollars	1995-based real value, purchasing power parity equivalent

\*: NITEP REPORT No.73 Science and Technology Indicators: 2004

Note: The above is each component of the 1st principal component score (each variable multiplied by the corresponding principal component score coefficient) shown in Table 2-3-1.

Source: Calculated by NISTEP using the variables shown below.

1981	72.0	72.7	68.3	68.0	73.7
1982	72.1	72.9	68.0	67.7	73.1
1983	72.8	73.2	67.5 <sup>a</sup>	67.1	72.4
1984	72.5	73.7	66.4	66.8	73.4
1985	72.3	74.2	66.6	66.4	73.9
1986	72.2	75.0	67.3 <sup>a</sup>	66.5	73.7
1987	72.3	75.7	67.8	66.4	74.7
1988	72.5	76.3	68.0	66.3	75.6
1989	73.1	77.1 <sup>a</sup>	68.5	66.4	76.6
1990	74.3	77.8	69.5 <sup>a</sup>	66.7	76.9
1991	75.2	77.5	71.6	67.0	76.5
1992	75.7	77.8	71.5	66.9	75.9
1993	76.0	77.6 <sup>a</sup>	71.3	67.2	75.4
1994	76.3	78.0	71.1	67.3	75.2
1995	76.5	77.9	71.0	67.5	74.9
1996	77.0	78.0	71.2	67.8	75.1
1997	78.0	78.3	71.5	68.1	75.2
1998	78.2	78.2	72.1 <sup>a</sup>	68.7	74.9
1999	78.1	78.3	71.8	69.2	75.2
2000	78.5	79.1 <sup>a</sup>	71.8	69.6	75.2
2001	78.4	76.5	72.2	70.0	-
2002	78.0	76.1	72.3	-	-

Note: 1) Labor participation rate = (labor force ÷ population of age 15-64)×100.

2) The data for Germany until 1990 are for the former West Germany area, and after 1991, unified Germany.

1985	538	211	1,021	861	501	502	227	4	1,689	230
1990	690	239	1,157	940	535	448	233	3	1,702	274
1995	790	236	1,252	945	610	363	237	3	1,687	310
1996	804	240	1,263	933	618	352	240	2	1,686	318
1997	824	226	1,273	940	637	346	241	3	1,706	328
1998	844	222	1,290	928	654	340	232	3	1,634	333
1999	846	215	1,273	921	668	332	228	3	1,604	334
2000	856	206	1,285	911	677	321	221	3	1,580	347
2001	873	202	1,249	968	693	309	214	3	1,506	353
2002	890	187	1,228	934	717	291	211	4	1,468	349
2003	906	185	1,230	917	729	289	210	4	1,437	353

Note: Following the revision of classification of occupation at national census in 1980, Labor Force Survey changed its classification since January, 1981 as follows.

- 1) 'Mining/quarrying worker' was changed to 'Mining worker.'
- 2) 'Menial laborer' was changed to 'Labourer.'
- 3) 'Cleaning worker' in the 'Security/service employee' category was moved to the 'Labourer' category.

1993	-	-	3.9
1994	0.5	4.5	3.6
1995	0.9	4.3	4.3
1996	0.5	5.8	4.8
1997	1.4	8.3	4.4
1998	2.1	7.2	5.1
1999	1.9	8.5	5.7
2000	1.7	7.4	5.6
2001	1.2	7.0	5.0
2002	1.4	7.3	4.9

- Note: 1) Surveys were conducted as of end of December until 1999. In 2000, no survey was conducted. After 2001, surveys were conducted as of January 1st. Accordingly, the years in the tables and figures refer to the survey year.
- 2) The free time system for professional work is a system in which workers and management determine a certain job, whose means and hours to perform duties are left to the discretion of the worker, and when a worker has performed the job, it is deemed that the worker has spent a predetermined number of work hours regardless of the actual time spent on the job.
- 3) The de facto working hours system for manual workers is a system in which manual workers are deemed to have worked a predetermined number of work hours when it is hard to assess actual working hours.
- 4) The flexitime system is a system in which workers independently decide their opening and closing time within a time frame of the total monthly working hours that are predetermined by labor and management. In this case, the average working hours of certain period of time have to be within the working hours of the week.

<After 2000> Ministry of Health, Labour and Welfare, "General Study of Working Conditions"

**Figure 3-2-9: Implementation rates of planned OJT and Off-JT programs at Japanese business enterprises by scale of full-time workforce (FY2002)**

See: Table 3-2-9

**Table 3-2-9: Implementation rates of planned OJT and Off-JT programs at Japanese business enterprises by scale of full-time workforce (FY2002)**

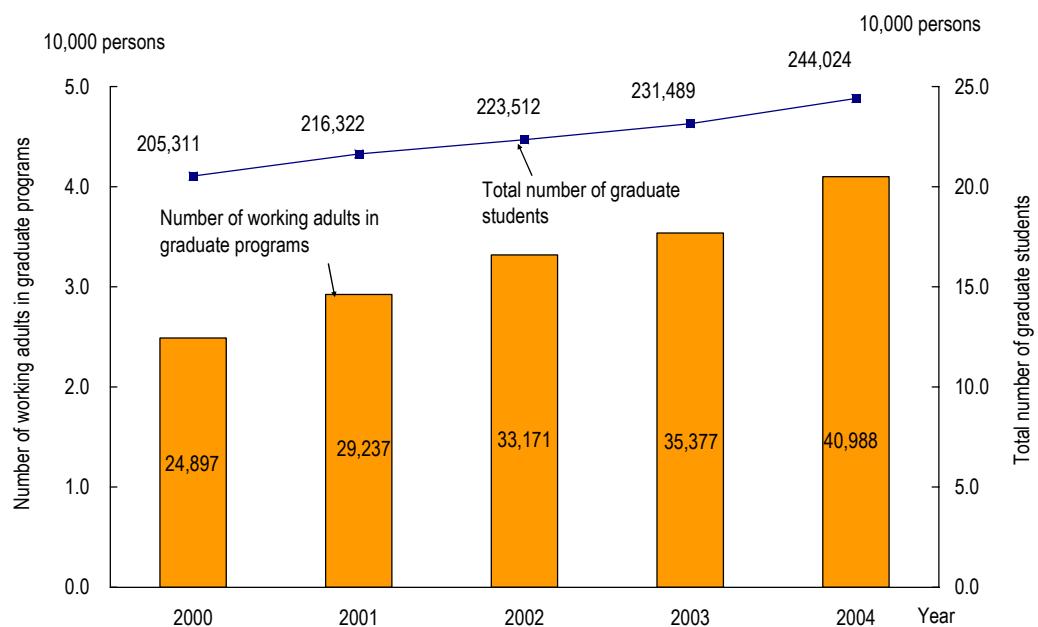

Scale of full-time workforce	Planned OJT implementation rate	Off-JT implementation rate
Less than 30 workers	29.1	29.1
30-49 workers	32	38.2
50-99 workers	41.2	48.8
100-299 workers	50.7	60.1
300 workers and more	73	82.5
Total	41.6	48.7

Notes:1) 'Planned OJT' is defined as employee training implemented while executing day to day duties, under an established training plan detailing the officers in charge of training, the employees to be trained, term and content of the training program, etc., conducted in phases or on continuing basis.

2)'Off-JT' is defined as employee training implemented by taking away trainees from their daily duties for a period of time.

Figure 3-2-12: Growth in the number of working adults in graduate programs in Japan

See: Table 3-2-9

Table 3-2-12: Growth in the number of working adults in graduate programs in Japan

Year	(unit: persons)		
	Total number of graduate students	Number of adult graduate students	Ratio to the total number of graduate students (%)
2000	205,311	24,897	12.1
2001	216,322	29,237	13.5
2002	223,512	33,171	14.8
2003	231,489	35,377	15.3
2004	244,024	40,988	16.8

Note: 1) 'Adult' refers to a person who has a job as of May 1st of each year, i.e., a person who has a job for the purpose of earning an income such as salary, wage, compensation, etc., including people retired from business organizations and housewives.

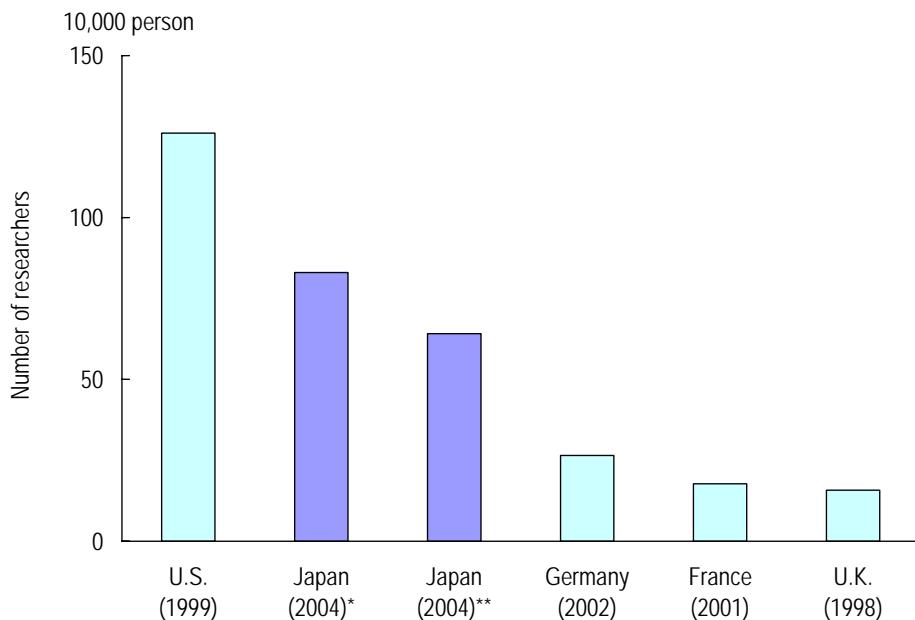

2) Here, a graduate student refers to a student who has enrolled in either a master's course or the first semester of a doctor's course, a doctor's course or the second semester of a doctor's course, or a professional graduate school.

## **Chapter 4**

### **The Researcher in a knowledge - based society**

**Figure 4-1-1: The number of researchers in selected countries**

See: Table 4-1-1

**Table 4-1-1: The number of researchers in selected countries**

Country		(unit: persons)
Country		Number of researchers
U.S.	(1999)	1,261,227
Japan (HC)*	(2004)	830,545
Japan (FTE value)**	(2004)	641,262
Germany	(2002)	264,685
France	(2001)	177,372
U.K.	(1998)	157,662

Note: 1) Japan (2004)\* means head count (HC) and Japan (2004)\*\* means the number of full-time equivalents (FTE).

2) See Table 6-1-4 of Chapter 6 for more detailed data for each country.

See: Table 4-1-2

Table 4-1-2: Trend in the number of researchers per 10,000 labor force

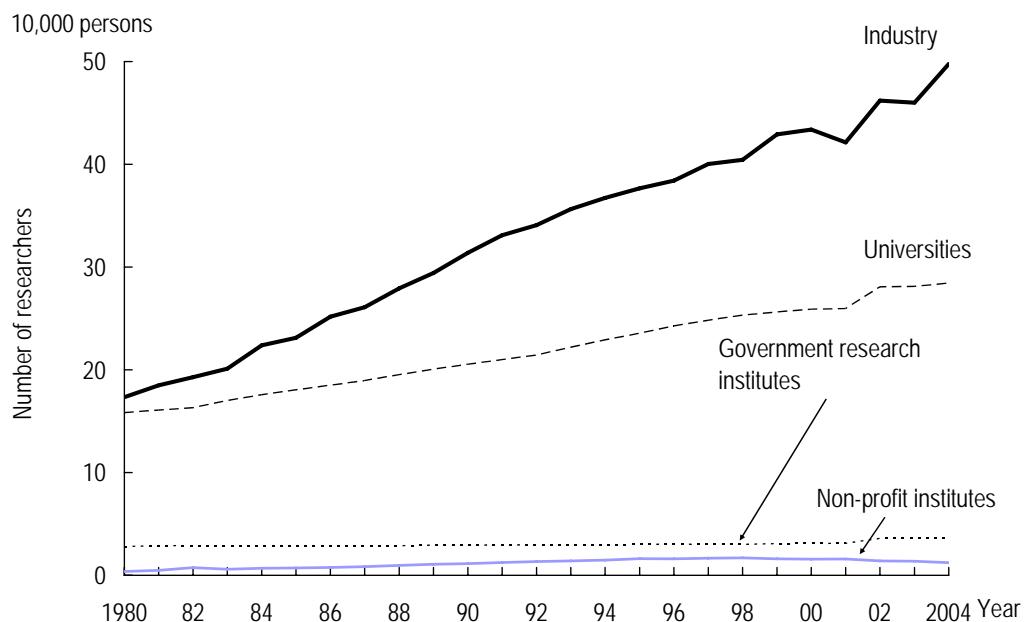

Year	Number of researchers (persons)	Labor force (10,000 persons)	Number of researchers per 10,000 labor force
1980	363,534	5,650	64
1981	379,405	5,707	66
1982	392,625	5,774	68
1983	406,042	5,889	69
1984	435,340	5,927	73
1985	447,719	5,963	75
1986	473,296	6,020	79
1987	487,779	6,084	80
1988	513,267	6,166	83
1989	535,008	6,270	85
1990	560,276	6,384	88
1991	582,815	6,505	90
1992	598,333	6,578	91
1993	622,410	6,615	94
1994	641,083	6,645	96
1995	658,866	6,666	99
1996	673,421	6,711	100
1997	695,623	6,787	102
1998	704,514	6,793	104
1999	732,658	6,779	108
2000	739,504	6,766	109
2001	728,215	6,752	108
2002	792,699	6,689	119
2003	791,224	6,666	119
2004	830,545	-	-

Note: 1) The labor force is the total of the number of employed and unemployed persons.  
 2) Number of researchers based on head count.  
 3) Researcher in the "Report on the Survey of Research & Development" of the Ministry of Internal Affairs and Communications used as data source, is defined by the following qualifications.  
 Until 2001: (i) A person who has completed a course of study at college or university (excluding junior college) or person who possesses equivalent specialized knowledge.  
 (ii) A person with research experience of more than two years.  
 (iii) A person engaged in research on a specific theme.  
 After 2002- : deleted from the above criteria.  
 Additionally, researchers were classified separately into regular researcher (person engaged chiefly in research inside the organization) and regular researcher (person who has principal workplace outside the organization) until 2001. Starting in 2002, researchers are counted in number only and not classified into these categories. The category of research in this data consists of regular researchers until 2001 and all researchers starting in 2002.  
 4) Includes natural science, social science and humanities.

1997	400,361	248,275	30,241	16,746	695,623
1998	404,232	253,165	30,212	16,905	704,514
1999	429,195	256,440	30,910	16,113	732,658
2000	433,758	259,012	30,987	15,747	739,504
2001	421,363	259,759	31,228	15,865	728,215
2002	461,962	280,710	35,992	14,035	792,699
2003	460,053	281,304	36,052	13,815	791,224
2004	497,620	284,330	36,268	12,327	830,545

Ratio					(unit: %)
Year	Industry	Universities	Government research institutes	Non-profit institutes	Total number of researchers
1980	47.7	43.6	7.7	1.0	100.0
1981	48.7	42.4	7.6	1.3	100.0
1982	49.1	41.6	7.4	1.9	100.0
1983	49.5	41.9	7.1	1.5	100.0
1984	51.4	40.4	6.6	1.6	100.0
1985	51.6	40.3	6.4	1.6	100.0
1986	53.2	39.1	6.1	1.6	100.0
1987	53.5	38.9	5.9	1.7	100.0
1988	54.4	38.1	5.6	1.9	100.0
1989	55.0	37.5	5.5	2.0	100.0
1990	56.0	36.7	5.2	2.1	100.0
1991	56.8	36.0	5.1	2.1	100.0
1992	57.0	35.8	4.9	2.2	100.0
1993	57.3	35.7	4.8	2.3	100.0
1994	57.3	35.7	4.7	2.3	100.0
1995	57.2	35.8	4.6	2.5	100.0
1996	57.0	36.1	4.5	2.4	100.0
1997	57.6	35.7	4.3	2.4	100.0
1998	57.4	35.9	4.3	2.4	100.0
1999	58.6	35.0	4.2	2.2	100.0
2000	58.7	35.0	4.2	2.1	100.0
2001	57.9	35.7	4.3	2.2	100.0
2002	58.3	35.4	4.5	1.8	100.0
2003	58.1	35.6	4.6	1.7	100.0
2004	59.9	34.2	4.4	1.5	100.0

Note: 1) The total number of researchers based on head count.

2) 'Industry' had been 'companies, etc.' in the "Report on the Survey of Research & Development" until 2001. From 2002 and later, data on 'business enterprises, etc.' has been used.

3) 'Non-profit institutes' had been classified as 'private research institutions' until 2001.

Source: Ministry of Internal Affairs and Communications, "Report on the Survey of Research & Development"

## (B) Change in the number of researchers by industrial sector

Year	Agriculture, forestry and fisheries	Mining	Construction	Manufacturing	(unit: persons)	
					Transportation/ communication/public services and others	Total industrial sector
1980	428	485	4,303	163,867	4,161	173,244
2004	196	476	7,912	428,680	60,356	497,620
Increase/ decrease	-232	-9	3,609	264,813	56,195	324,376

Note: 1) The total number of researchers based on head count.

2) Transportation/communication/public services and others, includes the software industry. However, data for plastics products is not available as of 1980.

Source: Ministry of Internal Affairs and Communications, "Report on the Survey of Research & Development"

## (C) Change in the number of researchers among manufacturing industries

Industry	(unit: persons)	
	1980	2004
Food products	6,092	22,279
Textiles mill products	3,846	2,232
Pulp and paper products	1,355	2,447
Printing and publishing	485	2,476
Industrial chemicals and chemical products	12,284	19,030
Oil and paints	5,325	9,257
Drugs and medicines	9,309	21,136
Petroleum and Coal product	1,316	1,608
Plastic products	-	6,859
Rubber products	3,180	7,452
Ceramics	5,355	6,727
Iron and steel	4,434	5,250
Non-ferrous metals and products	2,385	5,742
Fabricated metal products	4,117	7,017
General machinery	15,273	46,010
Electrical machinery, equipment and supplies	24,470	33,617
Communication/electronics/electric measuring instruments	30,997	133,571
Motor vehicles	12,026	47,402
Precision instruments	6,188	21,219

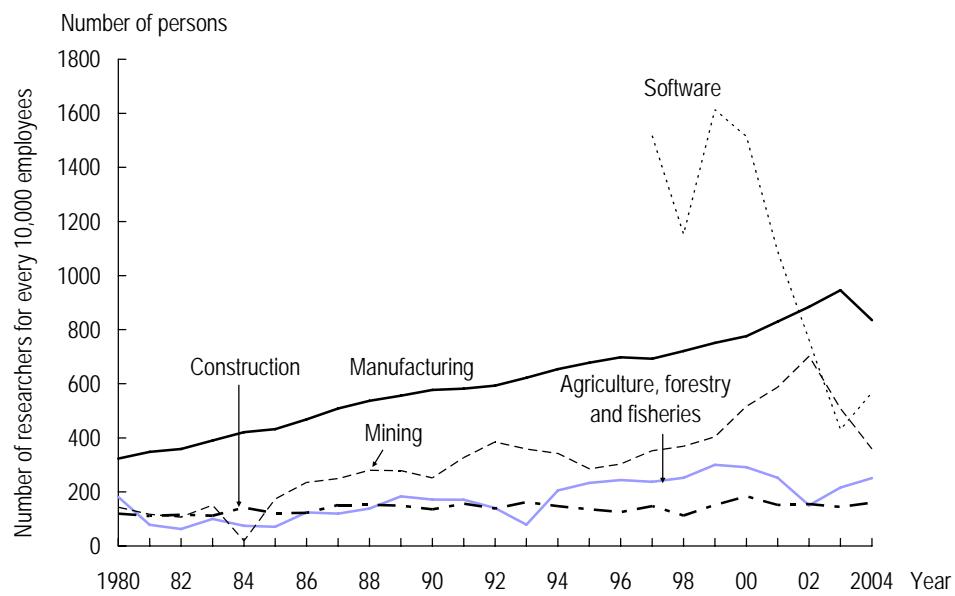

Note: 1) The total number of researchers based on head count.

2) Data for plastics products is not available as of 1980

3) 'Communication/electronics/electric measuring instruments' for 2004 is the total of 'electronics equipment & electric measuring instruments', 'information & communication electronics equipment' and 'electronic parts & devices' described in the "Report on the Survey of Research & Development".

1998	6,568	742	7,310	10.2
1999	6,811	761	7,572	10.1
2000	6,812	807	7,619	10.6
2001	6,687	820	7,507	10.9
2002	7,075	852	7,927	10.7
2003	7,025	887	7,912	11.2
2004	7,344	961	8,305	11.6

Note: The ratio of female researchers was extracted from the 'Report on the Survey of Research and Development' published by Ministry of Internal Affairs and Communications. The number of researchers until 2001 was calculated including only regular researchers for business enterprises and nonprofit organizations/public service organizations, but universities and colleges also included external researchers. After 2002, researchers of each sex were surveyed on a head-count basis.

**Figure 4-2-2: International comparison in the ratio of female researchers**

See: Table 4-2-2

**Table 4-2-2: International comparison in the ratio of female researchers**

Country	Ratio of female researchcers to the total (unit:%)
Latvia	52.7
Lithuania	47.0
Portugal	46.6
Bulgaria	45.5
Estonia	43.3
Ronamia	42.8
Greece	40.9
Poland	38.1
Slovenia	36.8
Spain	35.4
Iceland	34.6
Hungary	33.0
Ireland	29.4
Cyprus	29.3
Finland	29.1
Norway	28.3
Denmark	28.0
Italy	27.9
France	27.5
Czech Republic	26.8
U.K.	26
Slovak Republic	24.0
Switzerland	21.2
Austria	18.8
Germany	15.5
Japan	11.6

Note:1)The data of 2004 were used for Japan, data of 2002 for Iceland, of 2000 for Denmark, France, Ireland, Italy, Poland, Switzerland, and U.K. of 1999 for Greece and Portugal, of 1998 for Austria, and data of 2001 for other countries.

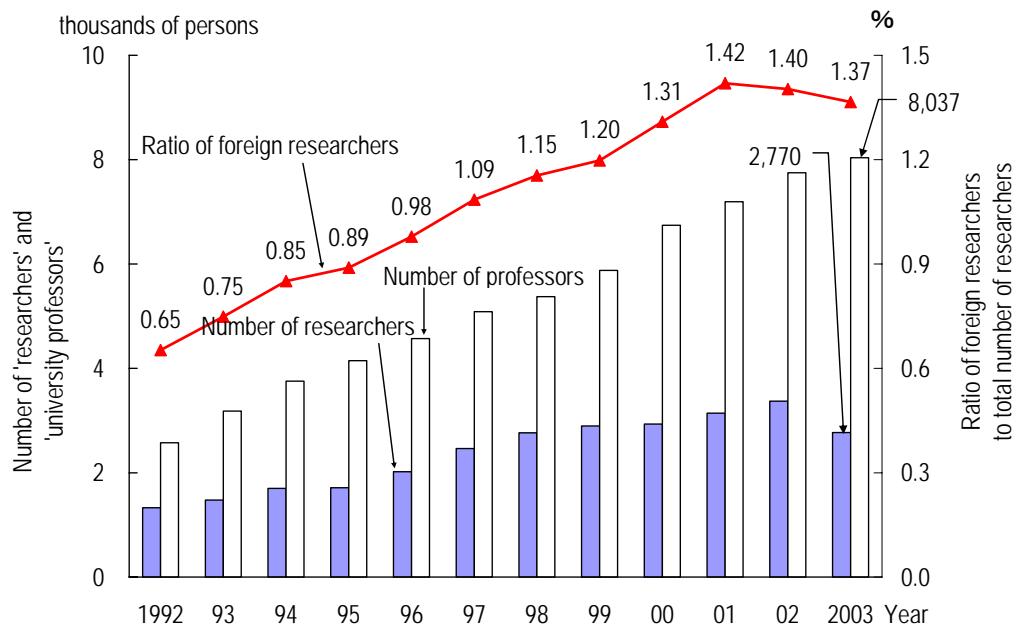

2) As for U.K., the numerical value under a decimal point is not released.

**Figure 5-0-1: The current state of students in school education (FY2004; conceptual chart)**

- Note: 1) Conceptual chart breaking down the number of all full-time students in the various types of academic institutions and the ratio of those in science and engineering (shaded segment). At undergraduate and postgraduate levels, 'natural sciences' represent the total of students in science, engineering, agricultural science and health sciences (including medicine, dentistry and pharmacology).
- 2) 'Natural sciences' in junior colleges represent the total of students in industrial courses, agriculture and health care.
- 3) The width of the bar graph represents the number of years required for completion of study. Bar area represents the number of students enrolled in such schools.
- 4) The number of graduate students excludes those in specialized academic courses.

**Figure 5-1-7: Average scores in student assessment and relationship with GDP**

See: Table 5-1-7

**Table 5-1-7: Average scores in student assessment and relationship with GDP**

Country	Average score of academic achievement (points)	GDP per capita (dollar)
Finland	546	26,344
Korea	541	15,916
Japan	532	26,636
Canada	527	29,290
Australia	526	26,685
New Zealand	525	21,230
Netherlands	524	28,711
Norway	520	36,587
Portugal	520	17,912
Poland	520	10,360
Belgium	518	27,096
Czech Republic	511	14,861
France	509	26,818
Ireland	505	29,821
Germany	502	25,453
Iceland	502	28,968
Denmark	500	29,223
Austria	498	28,372
Hungary	494	13,043
Italy	474	25,377
Greece	462	17,020
Switzerland	426	30,036
Sweden	426	26,902
Spain	426	21,347
Slovak Republic	426	11,323
Mexico	393	9,148
U.S.	366	35,179
Turkey	366	6,046

Note: 1) GDP figures are 2002 data.

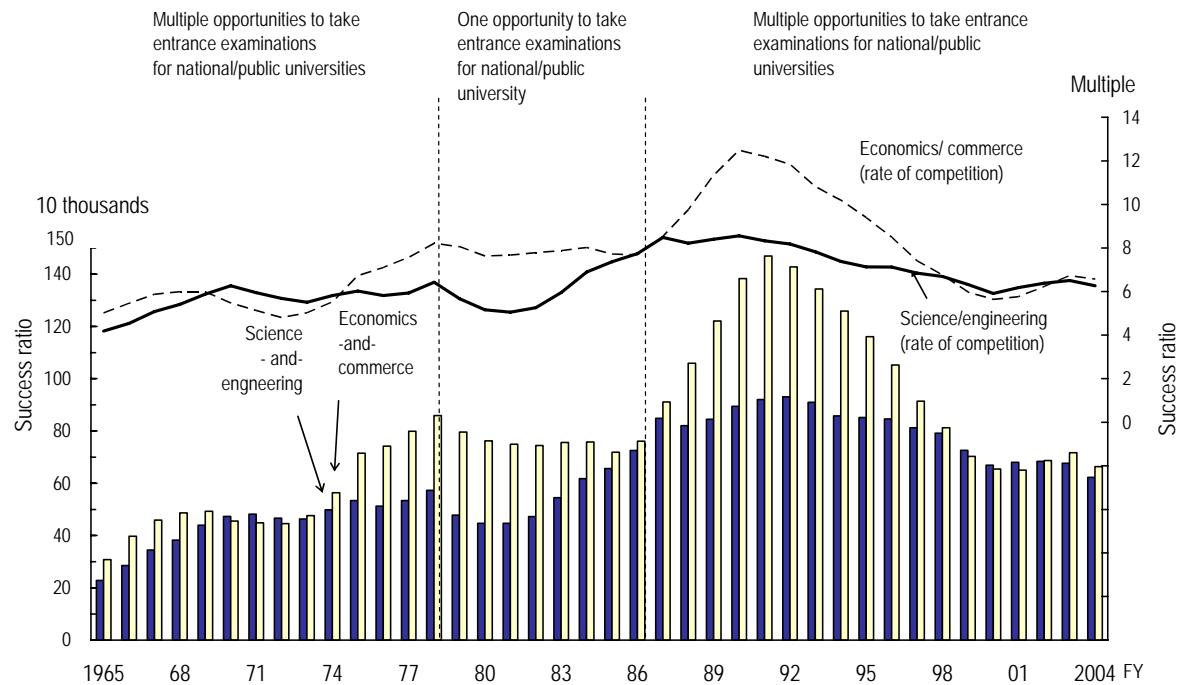

2) The average score of academic achievement is an average which is each score of problem-solving capability.

3) The average score of academic achievement, 485 points, is average score of all countries.

4) The diagonal line is a regression line (significant level 1%) by the least-square method for 28 OECD member countries' data.

Note: 1) Population of 18-years-old aged 18 is based on media estimates.

2) Advancement rate is percentage of university enrollments to the 18-years-old population.

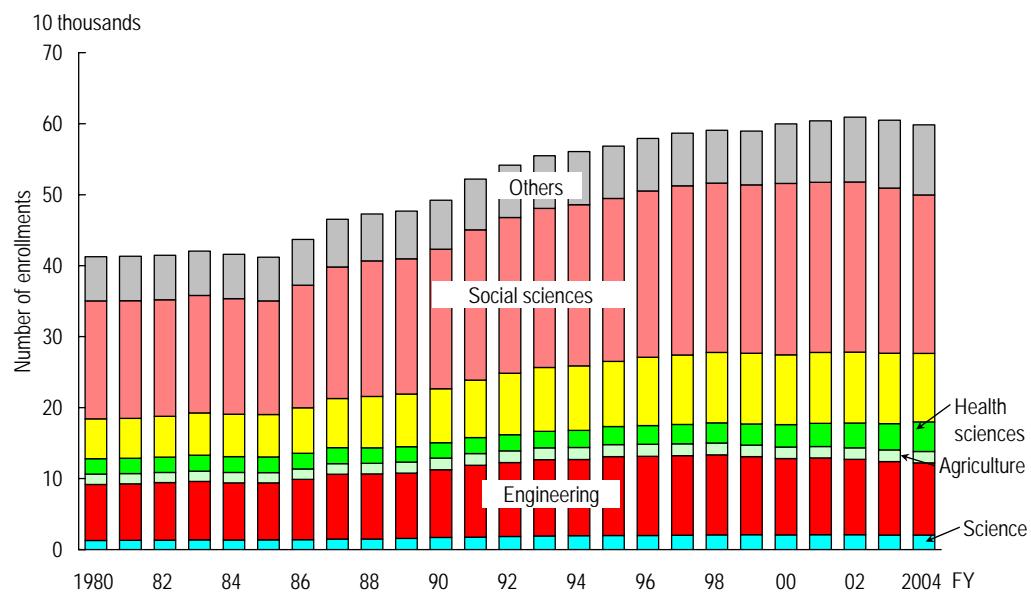

Source: 1) 18-years-old population:

Until 2002 'Population Estimates,' Statistics Bureau, Ministry of Internal Affairs and Communications (as of October each year)

From 2003 'Future Population Estimates of Japan' (estimate as of January 2002), National Institute of Population and Social Security Research, Ministry of Health, Labor and Welfare

2) Number of university enrollments:

Ministry of Education, Culture, Sports, Science and Technology, "School Basic Survey"

Note: &lt;Services&gt;

From 2003 data is based on the total of the major groups ('information and communications,' 'eating and drinking places and accommodations,' 'medical, health care and welfare,' 'education and learning support, "compound services' and 'services,n.e.c.) similar to those in "services industries" prior to the major revision of the Japan Standard Industrial Classification. These six categories are classified as 'service-related industries' herein. Also, 'service-related industries' include 'communications business' and 'eating and drinking places' categories that were not included in 'services' in the past.

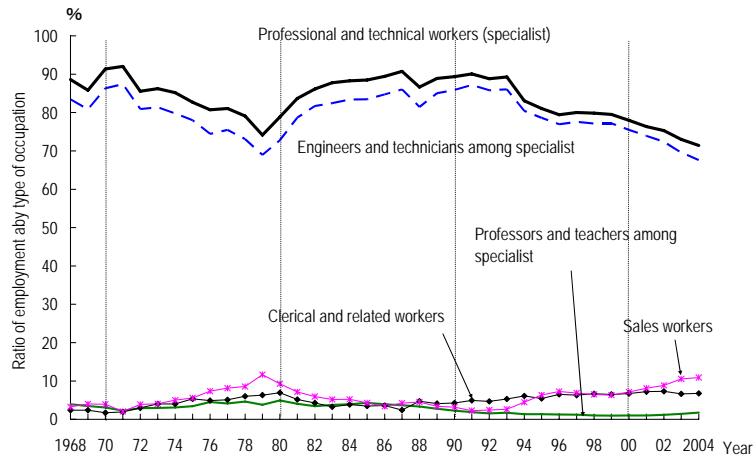

&lt;Manufacturing &amp; finance and insurance&gt;

These industries that did not undergo modification after revision of the classification system are shown in the pre-modification categories of 'manufacturing' and 'finance and insurance' for 2003. However, the sub-categories of 'newspaper business' and 'publishing' which were included in manufacturing in the past have now moved into the category of 'information and communications' following the modification.

Year	Employed (after 2003)										
	Agriculture, forestry and fisheries	Mining	Construction	Manufacturing	Wholesale and retail trade	Finance and insurance	Real estate	Transport and communications	Electricity, gas, water	Service-related <sup>1)</sup>	Government, n.e.c
2003	114	32	1,429	17,942	681	265	97	377	483	8,640	3,575
2004	103	24	1,563	18,701	746	257	95	374	535	8,893	3,520

Note: 1) 'Number of persons employed' includes 'employed and in higher education' (persons who continue education while being employed).

2) Those who took up temporary work, and 'Enrollments, such as a vocational school and a foreign school,' have included in 'the number of Unemployed.'

<Services>

From 2003 data is based on the total of the major groups ('information and communications,' 'eating and drinking places and accommodations,' 'medical, health care and welfare,' 'education and learning support, "compound services' and 'services,n.e.c.) similar to those in "services industries" prior to the major revision of the Japan Standard Industrial Classification. These six categories are classified as 'service-related industries' herein.

Also, 'service-related industries' include 'communications business' and 'eating and drinking places' categories that were not included in 'services' in the past.

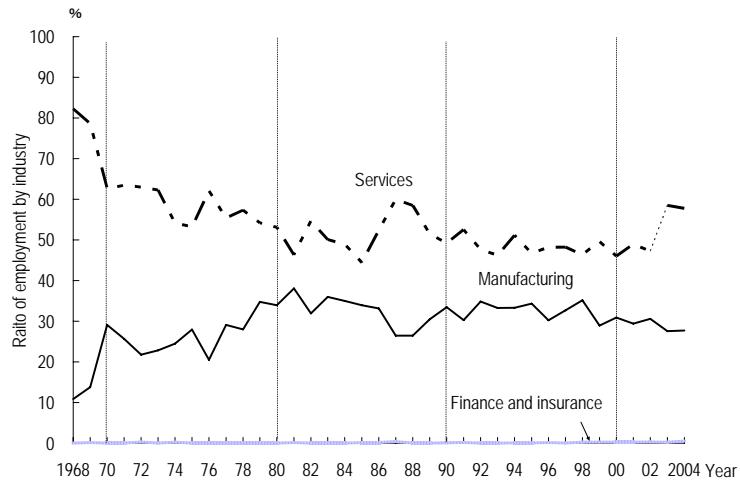

<Manufacturing & finance and insurance>

These industries that did not undergo modification after revision of the classification system are shown in the pre-modification categories of 'manufacturing' and 'finance and insurance' for 2003. However, the sub-categories of 'newspaper business' and 'publishing' which were included in manufacturing in the past have now moved into the category of 'information and communications' following the modification.

Note: 'Number of persons employed' includes 'employed and in higher education' (persons who continue education while being employed).

The inner number of "Professional and technical workers" has an item in others.

Note: a: Break in series with previous year for which data is available.

b: Secretariat estimate or projection based on national sources.

c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.

g: Excluding R&D in the social sciences and humanities.

m: Underestimated or based on underestimated data.

p: Provisional.

\*:Pre-EMU euro should not be used to form area aggregates or to carry out cross-country comparisons.

1) R&D expenditure includes social sciences and humanities (except for Republic of Korea). The data for Japan include the software industry since fiscal year 1996.

2) The data for Germany refer only to the former federal states until 1990 and to all of Germany since 1991.

3) The real figures are calculated using the deflator (based on Reference Statistics D).

4) The same purchasing power parities as for Reference Statistics D are used.

2004	830,545	641,262	-	-	-	-	-	-	-	-

Note: The figures are the total number of researchers of both natural science and human/social science for each country.

a: Break in series with previous year for which data is available.

b: Secretariat estimate or projection based on national sources.

c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.

g: Excluding R&D in the social sciences and humanities.

m: Underestimated or based on underestimated data.

<Japan>1) As the contents and period of the statistical survey were changed, using the number of regular researchers as of the 1st day of April until 2000, and after 2001, the number of researchers as of the 31st day of March.

2) Japanese researchers (FTE value) were calculated based on 'Survey on the data for full-time equivalents in universities and colleges' conducted in 2002. However, the data for "medical staff and others" (FTE) are calculated using the conversion factor for faculty.

<Germany> Former federal district before 1990 and Germany after 1991.

Private non-profit research institutes	284	0.9	456	1.4
Foreign countries	2,367	7.2	-	-
Total	32,887	100.0	32,887	100.0

## (E)R&amp;D expenditure in U.K.(2002)

Sector	(unit: million pounds)			
	Source		Performance	
	Amount	Ratio (%)	Amount	Ratio (%)
Industry	9,143	46.7	13,110	67.0
Government	5,258	26.9	1,750	8.9
Universities	196	1.0	4,413	22.6
Private non-profit research institutes	961	4.9	290	1.5
Foreign countries	4,003	20.5	-	-
Total	19,562	100.0	19,562	100.0

## (F) R&amp;D expenditure in China(2002)

Sector	(unit: million yuan)	
	Source	
	Amount	Ratio (%)
Industry	78,780	61.2
Government	36,930	28.7
Universities	13,050	10.1
Total	128,760	100.0

## (G)R&amp;D expenditure in Republic of Korea(2002)

Sector	(unit: million won)			
	Source		Performance	
	Amount	Ratio (%)	Amount	Ratio (%)
Industry	12,508,848	72.2	12,975,354	74.9
Government	4,397,144	25.4	2,317,920	13.4
Universities	274,482	1.6	1,797,096	10.4
Private non-profit research institutes	68,331	0.4	234,711	1.4
Foreign countries	76,277	0.4	-	-
Total	17,325,082	100.0	17,325,082	100.0

## (H)R&amp;D expenditure in EU-15(2001)

Sector	(unit: million dollars)	
	Source	
	Amount	Ratio (%)
Industry	119,224	64.7
Government	24,081	13.1
Universities	39,353	21.4
Others	1,592	0.9
Total	184,250	100.0

## (I) R&amp;D expenditure in EU-25(2001)

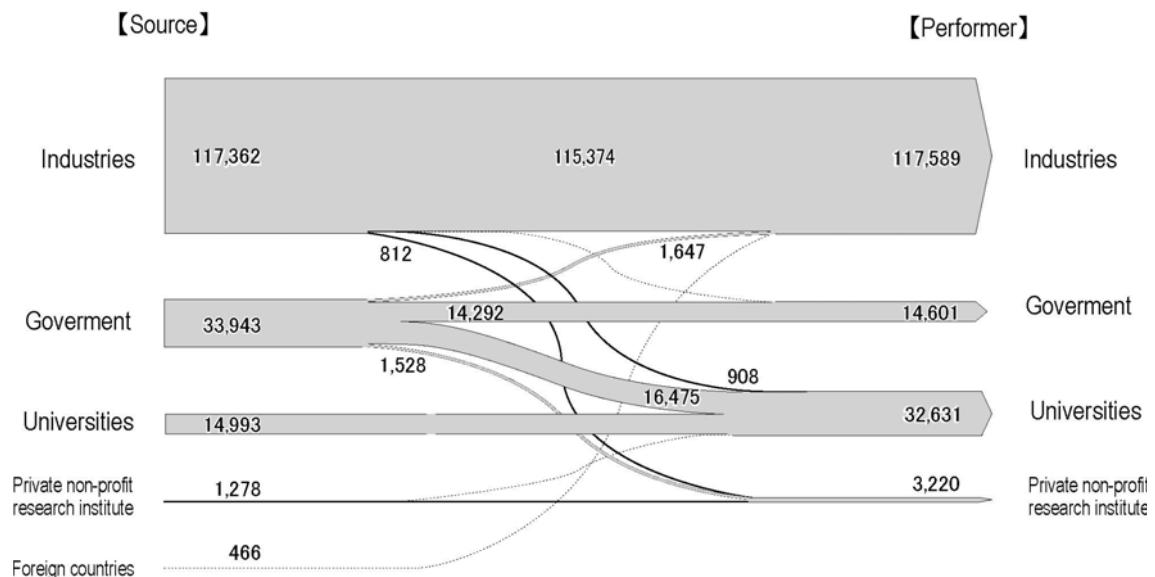

Sector	(unit: million dollars)	
	Source	
	Amount	Ratio (%)
Industry	122,592	64.0
Government	26,106	13.6
Universities	41,190	21.5
Others	1,621	0.8
Total	191,508	100.0

Note: Amount of R&D expenditure is the total amount of R&D expenditure for natural science and human/social science (excluding Korea).

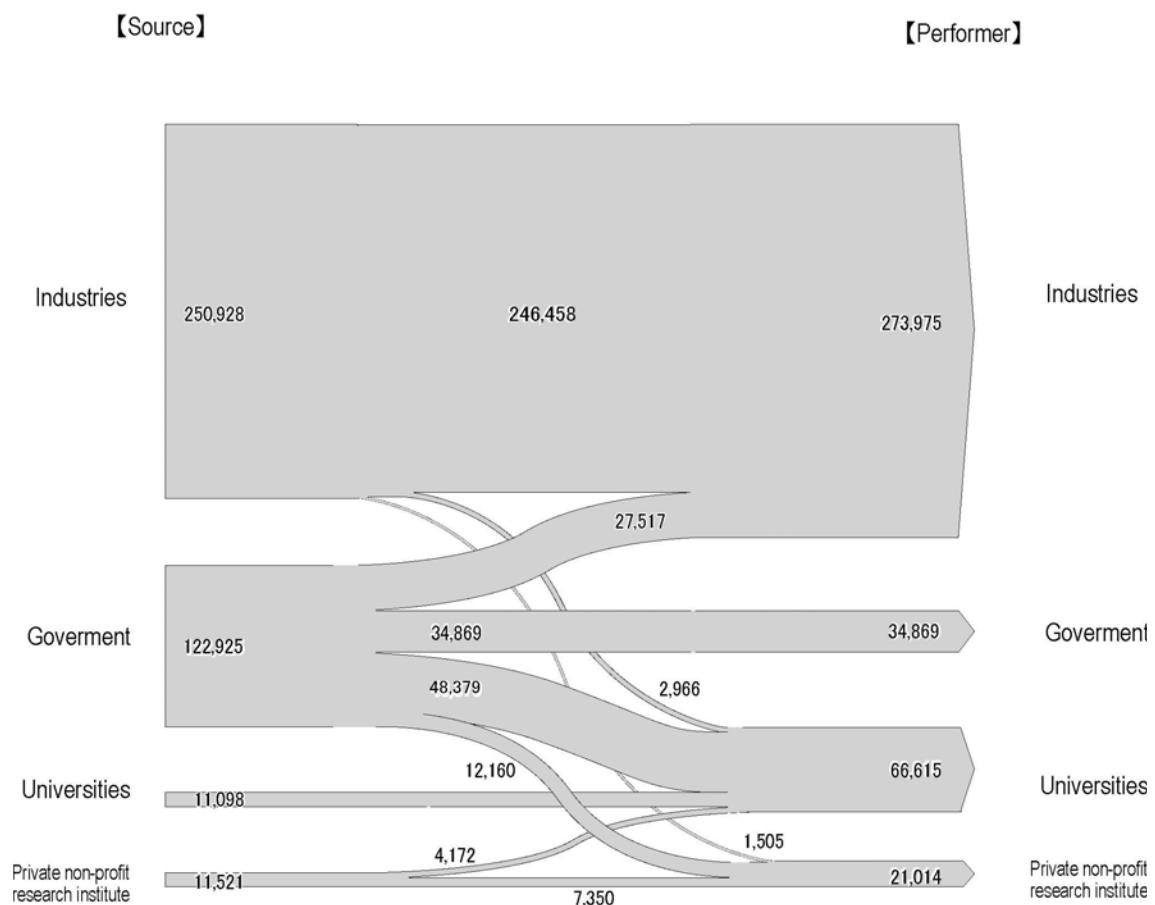

- <Japan> 1) Source industry includes national government, local public entities, government-affiliated firms, independent administrative agencies, government financial corporation and public corporation.  
 2) Source government includes national government, local public entities, national and public universities (including junior colleges), national and public research institutes, research institutes of government-affiliated firms and independent administrative agencies, and others.  
 3) Source universities are private universities.  
 4) Performing government includes research institutes of national, public, and government-affiliated firms, independent administrative agencies (not run on a stand-alone basis (national government and local public entity-affiliated)).  
 5) Performing universities are national, public, and private universities (including junior colleges).
  - <U.S.> 1) R&D expenditures are preliminary figures. Source is federal government (However, part of R&D expenditure used by universities is funded by the state government).  
 2) Universities are private universities and state universities.  
 3) Performing government is federal government research institutes.  
 4) Figures of Federal Fund R&D Center (FFRDC's) under the supervision of universities are compiled for each R&D-implementing department.  
 5) Preliminary
  - <Germany> 1) Source governments are federal and state government. Performing government is federal, state, local government administrative agencies and nonprofit private research organizations.  
 2) Itemized figures may not always be consistent.  
 3) Government estimates or modified as necessary to comply with the OECD standard.  
 4) R&D expenditure is the total expenditure for natural science and human/social science.
  - <France> 1) Performing government includes public research organizations. Performing universities include technical colleges (grandes écoles) and National Science and Research Center.  
 2) The data lack continuity with the data until the previous year.
  - <U.K.> Performing government includes central and local government, Research Council and Higher Education Fund Distribution Committee. Universities are private universities.
  - <Republic of Korea> Excludes R&D expenditure for human social science.
  - <EU> Provisional. Secretariat estimate or projection based on national sources.
- Source: <Japan> Ministry of Internal Affairs and Communications, "Report on the Survey of Research and Development"

Note: Same as Table 6-1-7.

pr: preliminary

a: Break in series with previous year for which data is available.

c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.

g: Excluding R&amp;D in the social sciences and humanities.

p: Provisional.

Note: a: Break in series with previous year for which data is available

b: Secretariat estimate or projection based on national sources.

m: Underestimated or based on underestimated data.

p: Provisional.

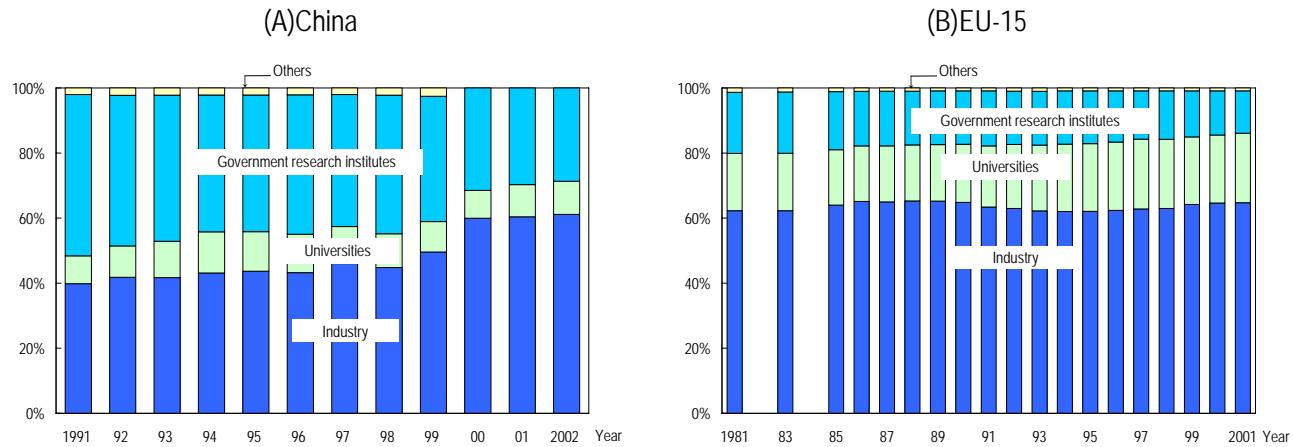

v: The sum of the breakdown does not add to the total (see General Methodology).

1) Includes R&D expenditure for human/social science.

2) 'Others' of China and EU are the figures of the total minus industries, universities, and government research institutes.

c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.

g: Excluding R&D in the social sciences and humanities.

d: Defence excluded (all or mostly)

o: Includes other classes.

1) Researcher in Japanese universities (FTE) were calculated based on the 'Survey on the data for full-time equivalents in universities and colleges' conducted in 2002

2) The data for the private non-profit sector of Countries other than Japan and the U.S. are calculated by subtracting the shares of the Industry, Universities, and Government research institutes from the total.

Note: Same as Table 6-1-1 and 6-1-4

For Japan, the calculation method for R&D expenditure per researcher differs between the period up to fiscal year 2000 and the subsequent period because the Statistics Bureau, the Ministry of Internal Affairs and Communications, changed in 2002 (effective for fiscal 2001 data) the content and date of the survey applicable to its 'Report on the Survey of Research and Development.'

R&D expenditure per person until fiscal year 2000 has been calculated by dividing annual R&D expenditure by the number of regular researchers as of the fiscal year beginning (April 1) and the expenditure since fiscal year 2001 has been calculated by dividing the annual R&D expenditure by the number of researchers as of the end of the fiscal year (March 31).

Note: k: Total intramural R&D expenditure instead of current intramural R&D expenditure.

v: Provisional.

a): The sum of the breakdown does not add to the total (see General Methodology).

1) The data for Japan include the software industry since FY1996.

2) R&D expenditure for Japan and Republic of Korea refer only to natural sciences. R&D expenditure for the other countries is the combined total of natural sciences and humanities.

3) The data for Germany refer only to basic research.

Note: 1) In 2002, the Ministry of Internal Affairs and Communications revised the organizational classification used for its 'Report on the Survey of Research and Development,' and the former categories of 'Companies' and 'Research Institutes' (used until 2001) have changed to the 'Business enterprises' and 'Non-Profit & institutions' sectors, respectively.

2) Non-profit organizations, which fell in the Research Institutes category until 2001, are included in the business enterprises sector in the subsequent years.

3) The same notes as Figure 6-2-5 (A) apply other than the above.

Country/Year	Researchers	Research assistants			Number of research assistants per researcher	
		Total		Technicians	Clerical and other supporting personnel	
U.S.(1999)	1,261,227	-	-	-	-	-
Germany(2001)	264,385	218,999	-	103,450	115,549	0.83
France(2001)	177,372	156,146	-	-	-	0.88
U.K.(1998)	157,662	-	-	-	-	-
Republic of Korea(2002)	189,888	89,918	69,021	-	20,897	0.47

Note: 1) Note for researchers is the same as in Table 6-1-4..

2) The data for Japan and Republic of Korea represent head counts.

3) Research assistants are those who are engaged in those who assist a researcher, those who offer technical service which accompanies research, and research office work, and are an assistant research worker, a technician, and the clerical and other supporting personnel in Japan.

**Figure 7-1-2: Growth in the number of scientific papers published, by country and region (natural sciences and engineering)**

See: Table7-1-2

**Table 7-1-2: Growth in the number of scientific papers published, by country and region (natural sciences and engineering)**

	Number of scientific papers published		Number of increases (B) – (A)	Rate of increase $\{(B) - (A)\}/(A)$
	(A) 1989–1993	(B) 1999–2003		
U.S.	1,011,504	1,147,192	135,688	13.4%
Japan	235,276	352,243	116,967	49.7%
U.K.	231,238	311,071	79,833	34.5%
Germany	216,804	318,769	101,965	47.0%
France	161,438	229,860	68,422	42.4%
EU countries	917,257	1,312,531	395,274	43.1%
Asia-Oceania countries	459,094	797,109	338,015	73.6%
Latin America countries	50,109	120,042	69,933	139.6%
Total	2,740,086	3,515,686	775,600	28.3%

Note: 1) The data for the EU are the total of the current 15 member countries. The data for Asia and Oceania include Japan.

2) Papers published by authors from different countries or regions have been double-counted according to each author's national or regional affiliation. Therefore, the total of all countries or regions does not equal the value of the aggregate total.

Note: 1) The data do not include social sciences and humanities.

2) Five-year-window data have been used to ensure a comparison of citation data on the same basis.

3) Papers published by authors from different countries have been double-counted according to each author's national affiliation.

Note: 1) (Relative Citation Index: RCI) = (Times cited per paper for a country) / (Times cited per paper worldwide)

2) The data do not include social sciences and humanities.

3) Five-year-window data have been used to ensure a comparison of citation data on the same basis. For example, '-2003' represents the cumulative sum for the five-year period between 1999 and 2003.

European Patent Office	19.0	24.7	23.4	8.1	3.9	0.0	20.8	100.0

Note: 1) Germany, France, and U.K. are members of EPC (European Patent Convention).

2) Includes patent applications to PCT (Patent Cooperation Treaty) and the European Patent Office.

3) Figures of the European Patent Office are based on the 'Table of patent applications filed and patents granted at the European Patent Office by nationality' and 'Detail table of designated states'.

**Figure 7-2-6: Ratio of patents filed in Japan, the U.S., and Europe by filed of technology**

See: Table7-2-6

**Table 7-2-6: Ratio of patents filed in Japan, the U.S., and Europe by filed of technology**

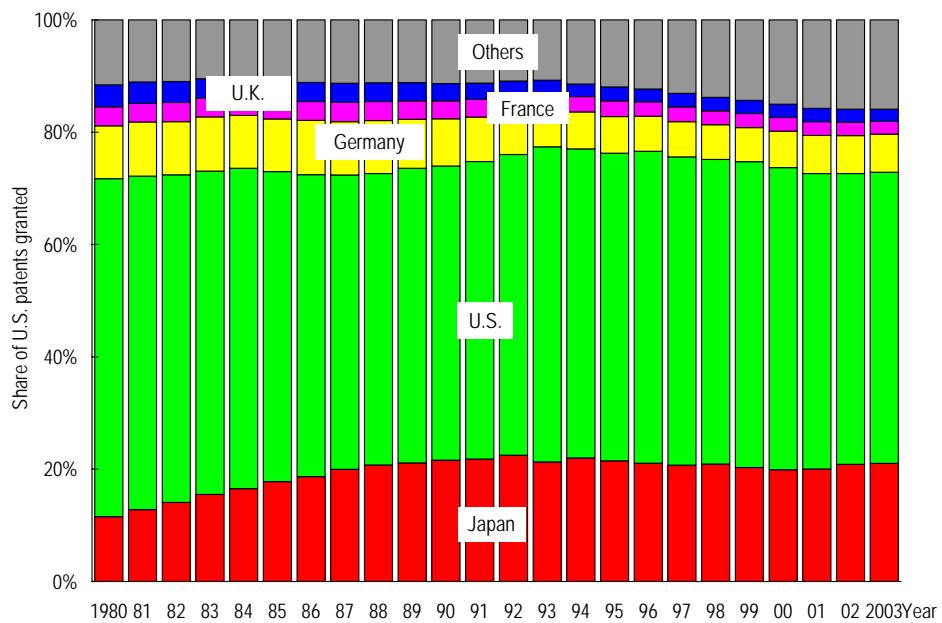

Fields	European Patent Office		Japan Patent Office		U.S. Patent and Trademark Office	
	2002	2003	2001	2002	2002	2003
	Ratio by fields					
Electricity	19	19	22	22	22	21
Physics	19	20	26	24	27	29
Mechanical engineering	8	8	8	8	6	6
Fixed constructions	3	3	4	4	2	2
Textiles; paper	2	2	1	1	1	1
Chemistry; Metallurgy	18	17	10	12	11	10
Performing operations	16	17	18	17	15	15
Human necessities	15	15	11	11	17	17
Total number of applications	106,325	116,613	436,097	417,615	334,445	342,441

Note: 1) The number of patent applications by field of technology of Japan Patent Office and European Patent Office is based on IPC (International Patent Classification).

2) Since the patent application to the United States Patent trademark agency was classified according to UPC (United States Patent classification), it was changed into IPC data by the conversion table of UPC and IPC. Therefore, the technical range of the U.S. data differs from Europe and Japan somewhat.

H04	Electric communication	2,318.5	5,274.5	10,264.6

Note: Formal names of the fields are as follows.

A61:Medical or veterinary science; hygiene

B65:Conveying; packing; storing; handling thin or filamentary material

C07:Organic chemistry

C08:Organic macromolecular compounds; their preparation or chemical working-up; compositions based thereon

F16:Engineering elements or units; general measures for producing and maintaining effective functioning of machines or installations; thermal insulation in general

G01:Measuring; testing

G03:Photography; cinematography; analogous techniques using waves other than optical waves; electrography; holography

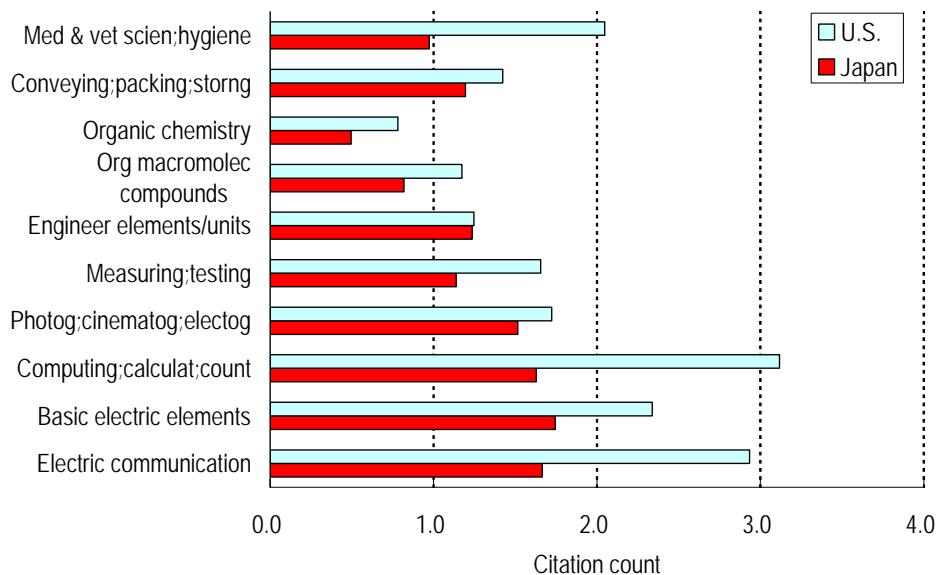

G06:Computing; calculating; counting

H01:Basic electric elements

H04:Electric communication technique

Note: Reinserted Table 1-2-4.

a: Break in series with previous year for which data is available.

p: Provisional.

\*: Pre-EMU euro should not be used to form area aggregates or to carry out cross-country comparisons.

The same purchasing power parities as for Reference Statistics D are used.

<Japan> Covers patents, expertise, and technical guidance.

Data lack continuity in 1996 and 2001 as several industry sectors were added for the survey.

<U.S.>Covers only loyalty and license.

<Germany> West Germany until 1990. Until 1985, it covered patents, licenses, trademarks, and design. After 1986, technical services, computer services, and R&D in industrial sector were included in addition to these.

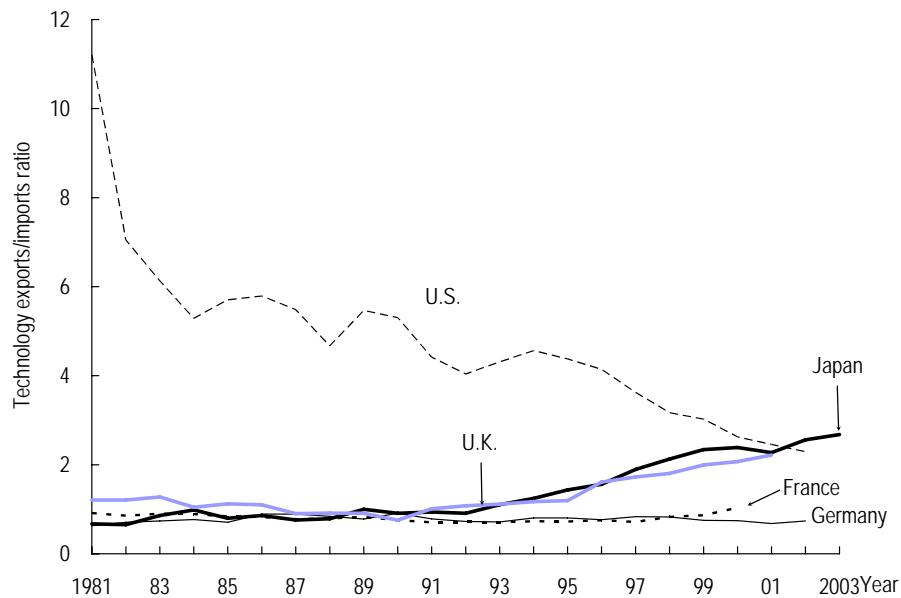

<France> Definition unclear.

<U.K.>Included oil business since 1984. After 1996, included patent, invention, license, trademark, design, technology-related services and R&D.

Note: <Japan> A parent and subsidiary relationship is acknowledged when a business enterprise is more than 50% owned by another.

<U.S.>Details may not add to totals because of rounding. A parent and subsidiary relationship refers to a business enterprise located in one country that is directly or indirectly owned or controlled by an entity in another country. Controlling interest must equal 10 percent or more of its voting stock, or its equivalent.

Note: (Science linkage) = (Times citing of scientific papers) / (Number of U.S. Patents)

Formal names of the fields are as follows.

A01: Agriculture; forestry; livestock farming; commercial hunting; hunting; fisheries

A61: Medicine or veterinary medicine; hygienics

C01: Inorganic chemistry

C07: Organic chemistry

C12: Biochemistry; beer; distilled liquor; wine; vinegar; microbiology; enzymology; mutation or genetic engineering

G06: Computer; calculation; counting

H01: Basic electric elements

2003	20.2	31.0 pr	-	-	-	

Note: R&D expenditure is the total expenditure of natural science and human/social science (for each country).

a: Break in series with previous year for which data is available.

Pr: Preliminary

<Japan>1) Government includes government, local public entities, national, public, or government-affiliated research institute, national and public universities (including junior college).

2) Japan includes software industry since 1996.

<U.S.>R&D expenditure for 2002 and 2003 is preliminary figure. Government includes federal government and federal government research institutes.

<Germany>Until 1990, former federal district, and aFTEr 1991, Germany. Government is federal and state government.

<France>Government is public research institutes.

<U.K.>Government includes central and local government.

Note: 1) Initial budget amount for each year.

- 2) The range of object cost is improved with decision of Science and Technology Basic Plan (the 1st term and the 2nd term) in 1996 and 2001.
- 3) Before 2000, the budget for the Japan Key Technology Center (October 1, 1985 establishment, April 1, 2003 dismissal) is reported at the Ministry of International Trade and Industry, and the Ministry of Posts and Telecommunications (however, accounting is made to avoid overlaps).
- 4) S&T budget is compiled by the Ministry of Education, Culture, Sports, Science and Technology, based on data collected from each ministry and agencies.
- 5) The funding for special or other public corporations included in the S&T budget of the Industrial Investment Special Account, which is administered by the Ministry of Finance, has been split among the respective competent ministries of such public corporations. The exception is expenditure on the National Agriculture and Bio-oriented Research Organization, which is under the joint jurisdiction of the Ministry of Finance and the Ministry of Agriculture, Forestry and Fisheries, and has been reported as a budget of the latter ministry only.
- 6) The integrated value of each column and total value may not be consistent because of rounding-off.

See: Table9-1-10

**Table 9-1-10: S&T budgets of ministries and local governments**

## (A) By ministries and agencies (2004)

By ministries and agencies	Budget (million yen)	Share (%)
Ministry of Education, Culture, Sports, Science and Technology	2,283,991	63.3%
Ministry of Economy, Trade and Industry	605,328	16.8%
Defense Agency	185,522	5.1%
Ministry of Health, Labor and Welfare	129,020	3.6%
Ministry of Agriculture, Forestry and Fisheries	119,042	3.3%
Others	285,458	7.9%
Total	3,608,361	100.0%

## (B) Comparison with local governments (FY2003)

By ministries and agencies	Budget (million yen)
Ministry of Education, Culture, Sports, Science and Technology	2,290,193
Ministry of Economy, Trade and Industry	611,296
Defense Agency	160,812
Ministry of Health, Labor and Welfare	133,994
Ministry of Agriculture, Forestry and Fisheries	118,777
Ministry of Land, Infrastructure and Transport	80,659
Ministry of Public Management, Home Affairs, Posts and Telecommunications	80,061
Cabinet Secretariat	64,440
Ministry of the Environment	31,236
Ministry of Foreign Affairs	10,403
Cabinet Office	8,448
National Police Agency	2,230
Ministry of Justice	2,178
Ministry of Finance	1,650
Diet	988
47 prefectures	376,029
13 ordinance designated cities	80,798

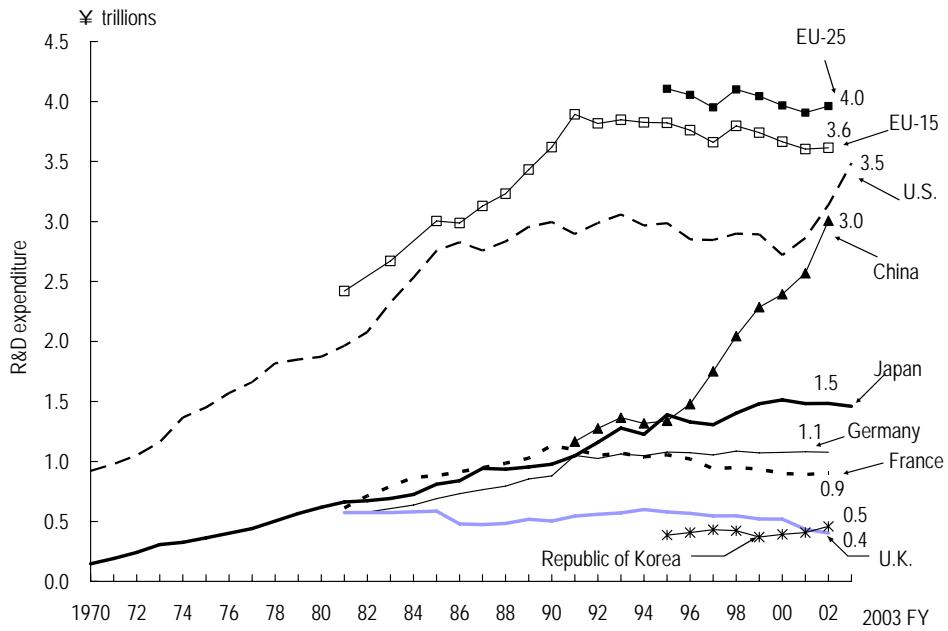

Note: 1) The data refer to the original budget.

2) Local government budget does not include national treasury disbursement.

2003	1,460,139	3,486,860 pr	-	-	-	-	-	-	-

Note: Pr: Preliminary

a: Break in series with previous year for which data is available.

b: Secretariat estimate or projection based on national sources.

c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.

g: Excluding R&amp;D in the social sciences and humanities.

p: Provisional.

v: The sum of the breakdown does not add to the total

1) R&amp;D expenditure includes expenditure in social sciences and humanities

2) The data for Japan include the software industry since FY1996.

3) The data for Germany refer only to the former federal states until 1990 and to all of Germany since 1991.

4) Reference Statistics E is used for purchasing power parity equivalents.

Note: 1) As a result of the government reorganization in 2001, some of the national research institutes have become independent administrative institutions.

2) The calculation method for R&D expenditure per researcher differs between the period up to FY2000 and the subsequent period because the Statistics Bureau, and Ministry of Internal Affairs and Communications, changed in 2002 (effective for fiscal 2001 data) the content and date of the survey applicable to its fiscal 2001 data) the content and date of the survey applicable to its 'Report on the Survey of Research and Development.' R&D expenditure per person until FY2000 has been calculated by dividing expenditure per person until FY2000 has been calculated by dividing the annual R&D expenditure by the number of regular researchers as of the fiscal year beginning April 1. R&D expenditure per person since fiscal 2001 has been calculated by dividing the annual R&D expenditure by the number of researchers as of the end of the fiscal year (March 31). Note: a: Break in series with previous year for which data is available.

b: Secretariat estimate or projection based on national sources.

c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.

d: Defence excluded (all or mostly):

g: Excluding R&D in the social sciences and humanities.

o: Includes other classes.

<Japan> The data include the software industry since 1997. The value in 2002 and afterwards is as of [of the year concerned] March 31.

<U.S.> The data refer only to the federal government.

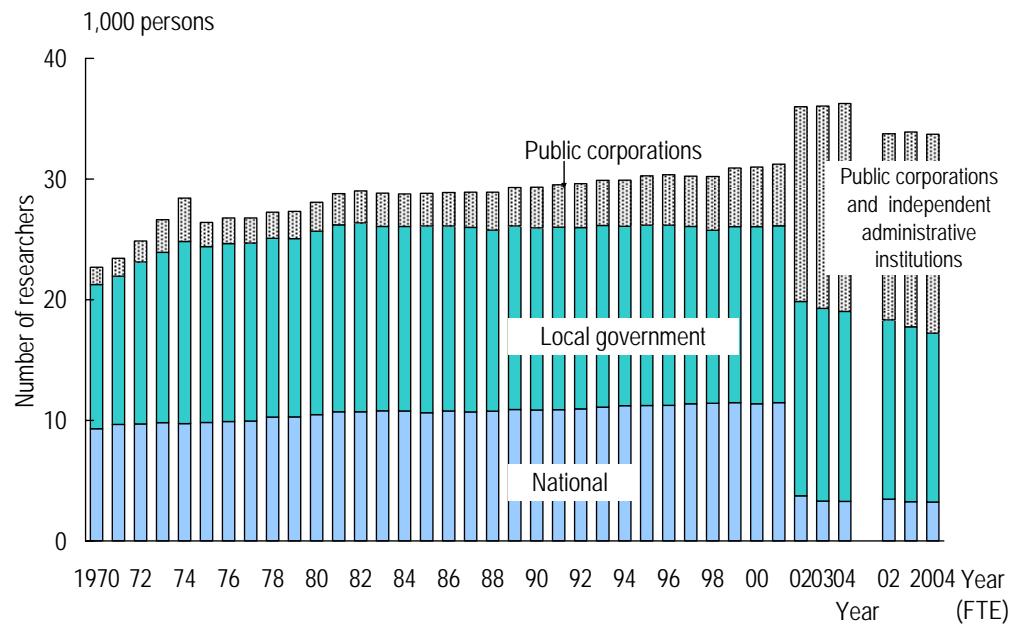

<Germany> The data refer only to the former federal states until 1990 and to all of Germany since 1991.

2004	3,287	3,235	15,746	13,989	17,235	16,487	36,268	33,711

Note: 1) The number of researchers based on head count.

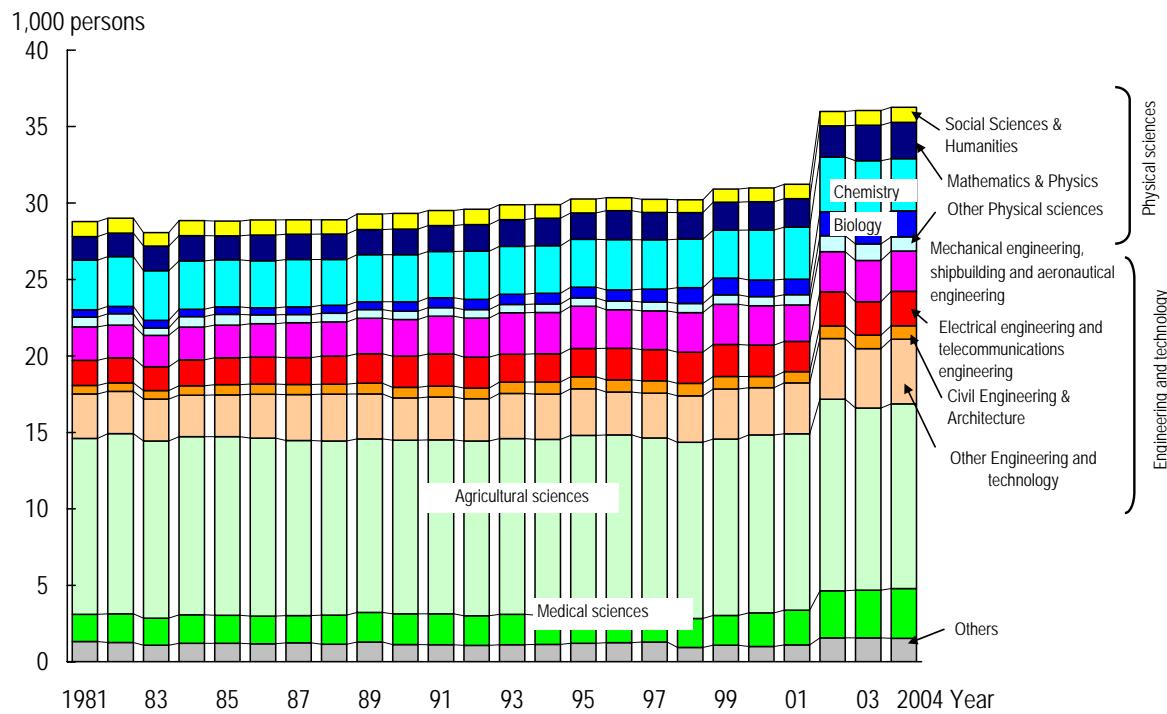

2) The 'Public corporations and independent administrative institutions' category refers only to 'Public corporations' until FY2000.

3) As a result of the government reorganization in FY2001, some of the national research institutes have become independent administrative institutions.

4) Due to a change in the survey content and date, data until 2000 refer to the number of regular researchers as of April 1 of that year and those since 2001 the number of researchers as of March 31 of that year.

Note: The figures are the total number of researchers of both natural science and human/social science for each country.

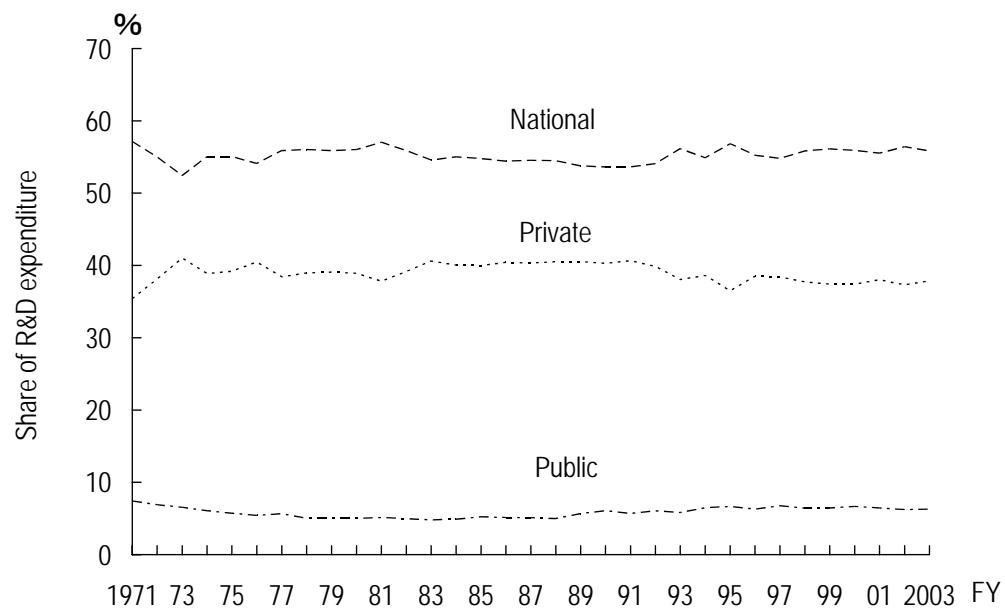

- a: Break in series with previous year for which data is available.
  - b: Secretariat estimate or projection based on national sources.
  - c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.
  - g: Excluding R&D in the social sciences and humanities.
  - v: The sum of the breakdown does not add to the total (see General Methodology).
- <Japan>1) As the contents and period of the statistical survey were changed, using the number of regular researchers as of the 1st day of April until 2000, and after 2001, the number of researchers as of the 31st day of March.
- 2) Japanese researchers (FTE value) were calculated based on 'Survey on the data for full-time equivalents in universities and colleges' conducted in 2002. However, the data for "medical staff and others" (FTE) are calculated using the conversion factor for faculty.
- <Germany> Former federal district before 1990 and Germany after 1991.

Note: 1) GDP is the same as Reference Statistics C.

2) Purchasing power parity is the same as Reference Statistics E.

a: Break in series with previous year for which data is available.

b: Secretariat estimate or projection based on national sources.

c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.

j: Excludes most or all capital expenditure.

m: Underestimated or based on underestimated data.

p: Provisional.

v: The sum of the breakdown does not add to the total (see General Methodology).

\*:Pre-EMU euro should not be used to form area aggregates or to carry out cross-country comparisons.

&lt;Japan&gt;1) Fiscal year basis.

2) In FY 2001, there were changes in the classification and addition of the industry sector in the Industrial Classification for the Survey of Research and Development.

3) In FY 2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.

&lt;U.S.&gt;Excludes capital expenditure.

&lt;Germany&gt;Data of West Germany until 1990.

&lt;France&gt;1) There was a change in industrial structure during 1991-1992. (France Télécom and GIAT Industries were moved from the category of Government to Business Enterprise).

2) The estimation method was changed in 1997.

&lt;U.K.&gt;1) There was a change in industrial structure during 1985-1986, and in 2000. ("United Kingdom Atomic Energy Authority" was moved from the category of Government to Business Enterprise).

2) The Defence Evaluation and Research Agency (DERA) was dissolved and three quarters of it became a private limited company and moved to the category of Business Enterprise.

3) Research institutes were reclassified during 1991-1992.

&lt;European Union&gt;National currency is U.S. dollar purchasing power parity equivalents.

&lt;China&gt;1) Data are of large- and medium-sized enterprises until 1999. After 2000, data are of all the industries and enterprises above a certain size.

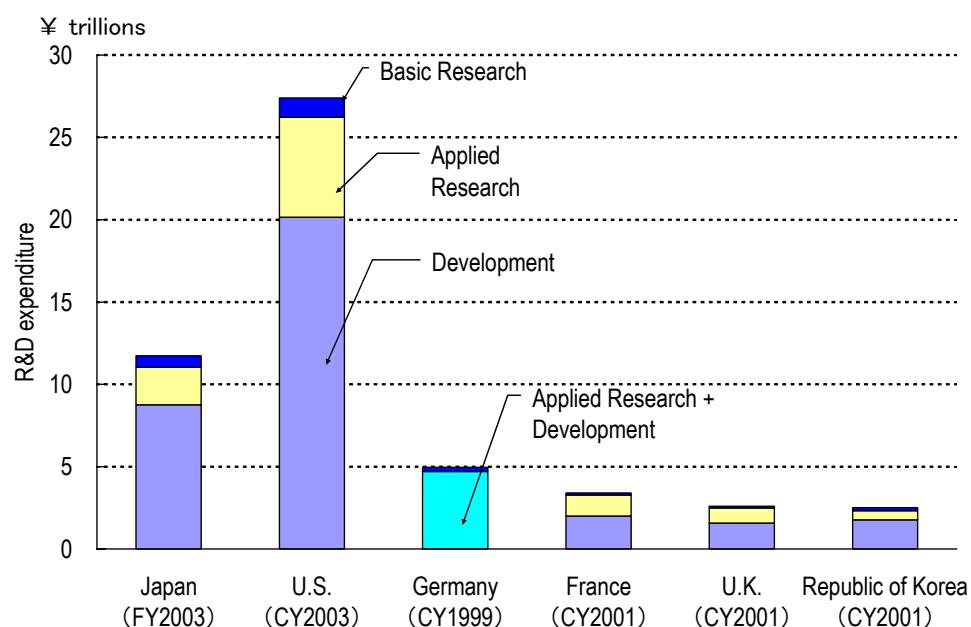

2) Excludes human/social science field.

<Japan, France, and Republic of Korea>Total R&D expenditure (current expenditure for R&D + capital expenditure for R&D)

<U.S., Germany, and U.K.>Current expenditure for R&D

a: Break in series with previous year for which data is available.

k: Total intramural R&D expenditure instead of current intramural R&D expenditure.

p: Provisional.

s: Unrevised breakdown not adding to the revised total.

<Japan>1) Fiscal year basis.

2) In FY 2001, there were changes in the classification and addition of the industry sector in the Industrial Classification for the Survey of Research and Development.

3) In FY 2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.

4) Until 2000, all industrial R&D expenditure was defined as 'research expenditure used for natural science.'

5) After 2001, it is indicated as 'expenditure used for natural science out of industrial R&D expenditure.'

<U.S.> The total for each category may not be consistent with the grand total.

<Germany>1) West Germany until 1990.

2) The total for each category may not be consistent with the grand total.

<France>1) There was a change in the classification for the survey in 1991 (France Telecom and GIAT Industries were moved from the category of Government to Business Enterprise).

2) The statistical method was changed in 1998 (Estimation method of R&D expenditure, evaluation method of the defense field, evaluation method of R&D activities in large enterprises).

3) The total for each category may not be consistent with the grand total.

<U.K.>1) There was a change in classification for the survey during 1985-1986. The "United Kingdom Atomic Energy Authority (UKAEA)" was moved from the category of Government to Business Enterprise).

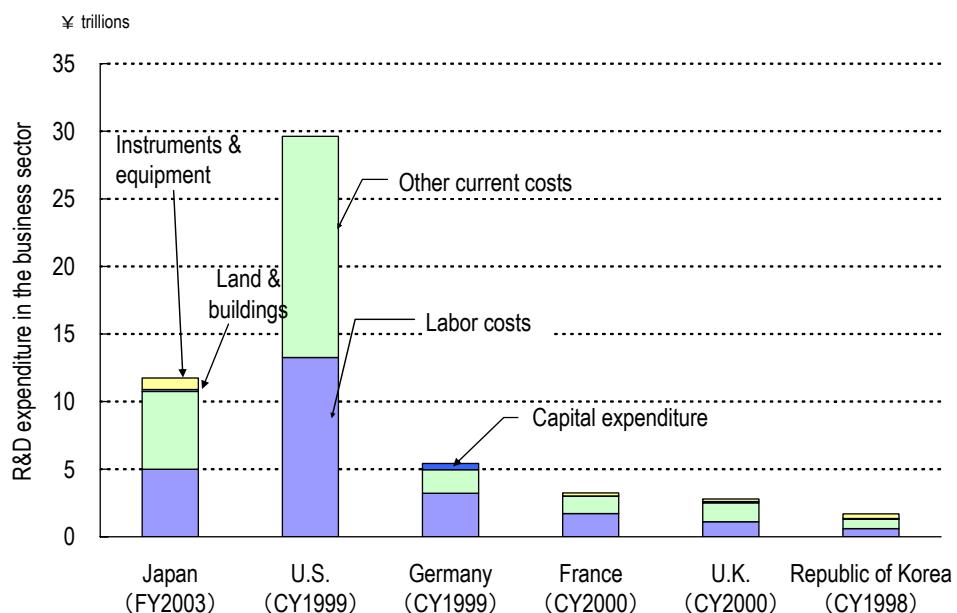

2) The total for each category may not be consistent with the grand total.

Note: Purchasing power parity is the same as Reference Statistics E.

<Japan>1) Fiscal year basis.

- 2) In the year 2001, there were changes in the classification and addition of the industry sector in the Industrial Classification for the Survey of Research and Development.
- 3) In 2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.
- 4) Because of different classification of data in Japan from that of other countries, Japanese data were reclassified as follows.  
Japan (Ministry of Internal Affairs and Communications) data: table above Labor costs Cost of raw materials + other expense (+lease expense (after 2001): Other current expenditure (other current costs) Land, building, etc.: Land and buildings  
Machinery/appliances/equipment + other tangible fixed assets: Instruments and equipment

<U.S.>1) Total R&D expenditure excludes most of or all capital expenditure.

- 2) After 1999: The industrial classification was changed from SIC to NAICS. Also, exclude R&D expenditure for agriculture field.
- 3) The total for each category may not be consistent with the grand total.

<Germany>1) West Germany until 1990.

- 2) The total for each category may not be consistent with the grand total.

<France>1) There was a change in classification for the survey in 1992 (France Télécom and GIAT Industries were moved from the category of Government to Business Enterprise).

- 2) The statistical method was changed in 1998 (Estimation method of R&D expenditure, evaluation method of defense field, evaluation method of R&D activities in large enterprises).
- 3) The total for each category may not be consistent with the grand total.

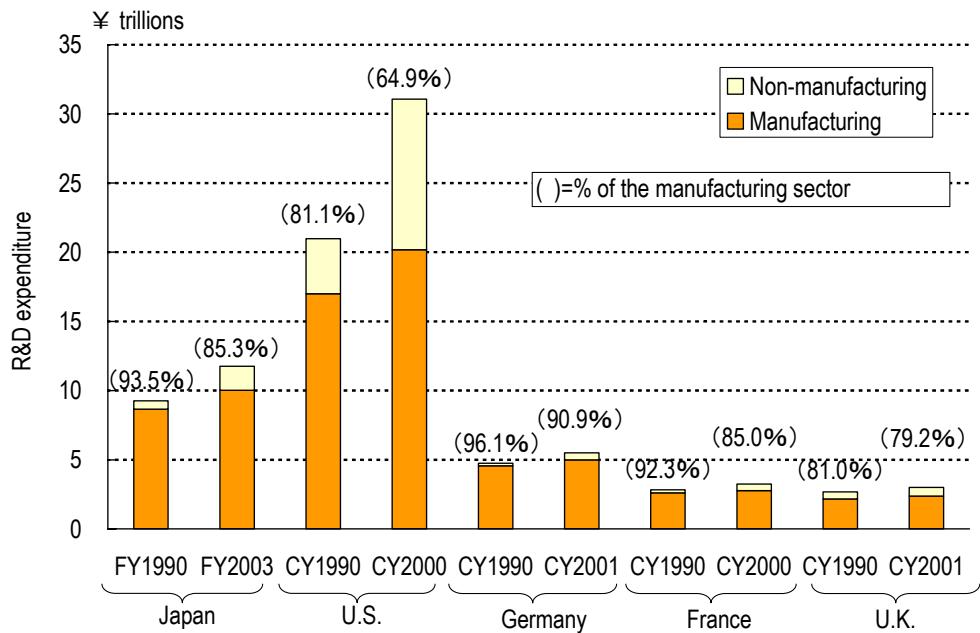

<U.K.>1) There was a change in the classification for the survey during 1985-1986. ("United Kingdom Atomic Energy Authority (UKAEA)" was moved from the category of Government to Business Enterprise).

- 2) The figures for R&D expenditure were changed in 1992.
- 3) The total for each category may not be consistent with the grand total.

2001	1,492,376	-	1,636,959	-	205,905	288,626
2002	1,677,626	-	-	-	-	-
2003	1,789,871	-	-	-	-	-

Note: 1) Purchasing power parity is the same as Reference Statistics E.

2) The industrial classification in Japan is based on Ministry of Internal Affairs and Communications, 'Report on the Survey of Research and Development,' in which the Japan Standard Industry Classification is partially modified.

3) The industrial classification of U.S., Germany, France (until 1999), U.K. (until 2000), and Republic of Korea is based on ISIC Rev.3.

4) The industrial classification of France (in 2000) is based on SIC in France.

5) The industrial classification of U.K. (in 2001) is based on SIC in U.K.

6) The Japan Standard Industry Classification is not consistent with ISIC Rev.3.

7) The Japanese title of each table is from the Ministry of Internal Affairs and Communications s data, and English title of each table is from OECD data.

<Japan>1) Fiscal year basis.

- 2) Includes software industry for the year 1996-2000.
- 3) In FY2001, there were changes in the classification and addition of the industry sector in Industrial Classification for the Survey of Research and Development.
- 4) In FY2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.
- 5) Along with these changes, the classification of FY2001 for industrial classification was used for FY2002 for this table as follows.

Table E: Electrical machinery and apparatus ← 'Other electrical machinery and apparatus, n.e.c.' in FY2002.

Table F: Radio, television and communications equipment ← 'Applied electronics/electrical measuring instruments' +

'Information-communications equipment' +'electronic parts/devices' in FY2002

<U.S.>Table B-H: Industrial classification was changed in 1999.

<Germany>Data for West Germany only until 1990.

<France>1) Table A: GIAT Industries and France Télécom were moved from the category of Government to Business Enterprise.

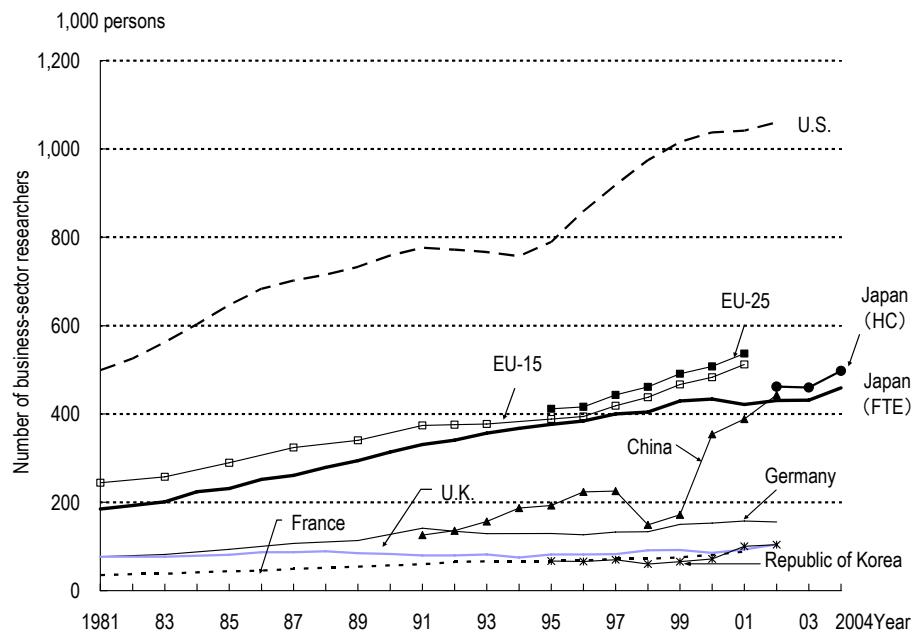

2) Table B: In 2000 value, the manufacturing industry could not be selected from as ISIC Rev.3 and SIC of France are different.  
Note: a:

Break in series with previous year for which data is available.

2003	-	-	-	-

Note: a: Break in series with previous year for which data is available.

b: Secretariat estimate or projection based on national sources.

c: National estimate or projection adjusted, if necessary, by the Secretariat to meet OECD norms.

m: Underestimated or based on underestimated data.

p: Provisional.

<U.S., Germany, France, U.K., European Union, Republic of Korea, China>The number of researchers based on FTE.

<Japan>1) Not actual data of whole industry.

2) In 2002, the Industrial Classification for the Survey of Research and Development was changed; change of definition of 'researcher,' the addition of industry sector, and change in classification surveyed.

3) In 2003, the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development were changed.

4) Until 2001, the number of regular researchers (FTE), and after 2002, number of researchers (Head-counts and FTE).

5) The timing of the survey was as of April 1st until 2001, and as of March 31st after 2002.

<U.S.>1) Annual average until 2000, and figure as of January 1st after 2001.

2) The number of researchers is the number of scientists and engineers.

3) The estimation method of the number of researchers was changed in 1985.

<Germany>Data for West Germany until 1990.

<France>1) There was a change in the classification for the survey during 1991-1992 (France Télécom and GIAT Industries were moved from the category of Government to Business Enterprise).

2) The survey procedure for managerial class researchers was changed in 1997.

<U.K.>1) There was a change in the classification for the survey during 1985-1986 and in 2000 ("United Kingdom Atomic Energy Authority" was moved from the category of Government to Business Enterprise during 1985-1986).

2) In 2000, the Defence Evaluation and Research Agency (DERA) was dissolved and three quarters of it became private limited company and moved to the category of Business Enterprise.

3) Classification of research institutes was reclassified during 1991-1992.

<China>1) Excludes human/social science field.

2) Until 1999, used data of large- and medium-sized enterprises. After 2000, data of all the industry and enterprises above certain size were used.

<European Union>No definition of country.

2003	2,363	2,563	-	-	-	-	-	-	-	-

Note: 1) Development costs: Same as Table 11-1-1.

2) Number of researcher: Same as Table 11-1-5.

3) Calculation formula: (R&amp;D expenditure) ÷ (number of researcher)

4) As for Japanese data, the contents of investigation and investigation time was changed from investigation in 2002 (it will be an object about the data in 2001), as for Ministry of Internal Affairs and Communications, "Report on the Survey of Research and Development", the calculation method of a research and development cost will differ from per one person in 2000.

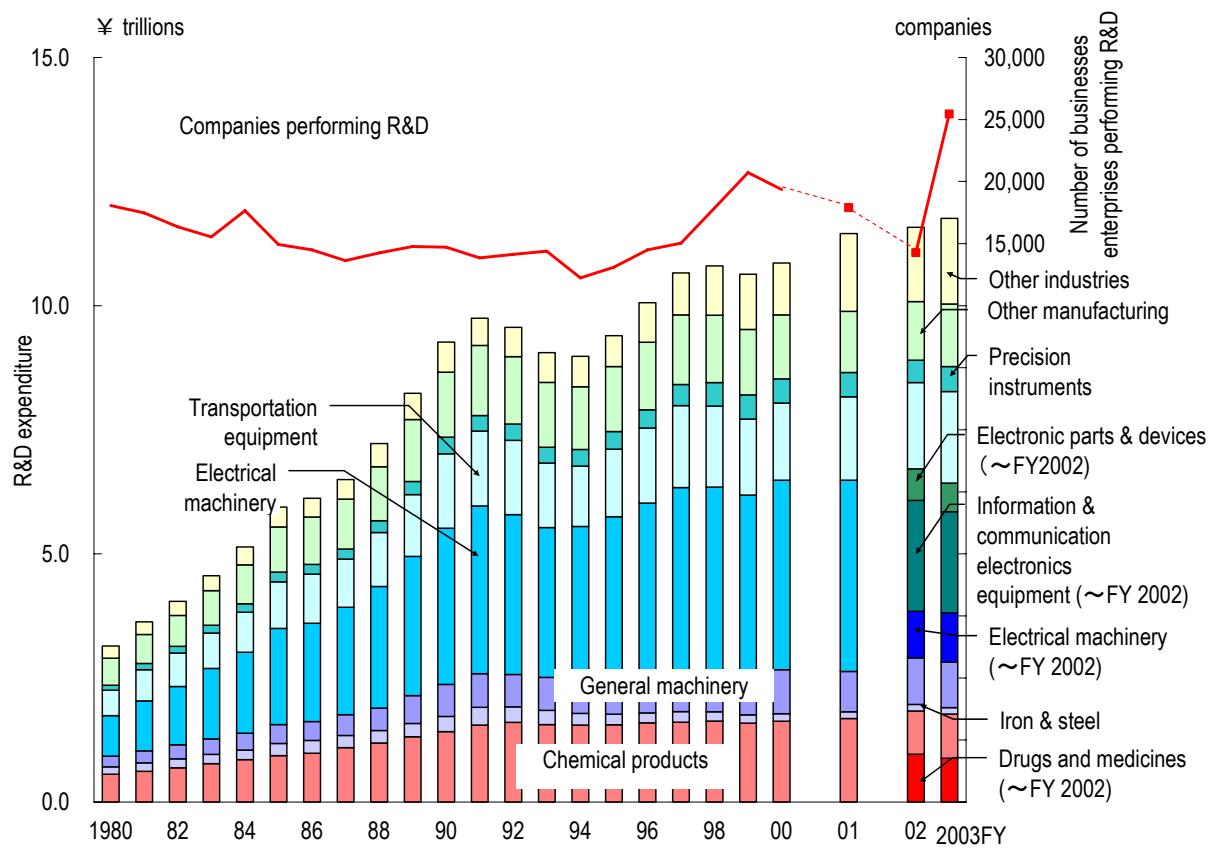

5) Till 2000, the research and development cost for one year of the fiscal year concerned was divided by the number of researchers of the time of a fiscal year (as of April 1), and the research and development cost was calculated per one person.

6) After 2001, the research and development cost for one year of the fiscal year concerned was divided by the number of researchers at the end of a fiscal year (as of March 31), and it calculated the research and development cost per one person.

Source: Research and development expenditure: Same as Table11-1-1.

Number of researchers: Same as Table11-1-5.

Figure 11-2-1: Trends in R&D expenditure by industry and the number of business enterprises performing R&D in all industries in Japan

See: Table11-1-5

**Table 11-2-1: Trends in R&D expenditure by industry and the number of business enterprises performing R&D in all industries in Japan**

2003	95.6

Note: <Table A, B>1) Fiscal year basis.

- 2) In FY2001, there were changes in the classification and addition of the industry sector in Industrial Classification for the Survey of Research and Development.
- 4) In FY2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.

<Table C> 1) Calendar year basis.

- 2) Industries surveyed were selected from the Japan Standard Industry Classification for the Survey of Research and Development report.
- 3) Japan Standard Industry Classification was revised in May, 1976, in January, 1984, in October, 1993, and in March, 2002.
- 4) Enterprises surveyed were selected from Ministry of Internal Affairs and Communications, 'Statistical Survey on Business establishments and Enterprises'
- 5) Until 2001: Data as of April 1st of each year. Targets are companies with capital of not less than 10 million yen and government-affiliated firms. Includes software industry for the year 1996-2000.
- 6) After 2002: Data as of March 31st of each year. Targets are enterprises with capital of not less than 10 million yen, government-affiliated firms, and independent administrative agencies. In the year 2002, there were changes in the classification and addition of the industry sector in Industrial Classification for the Survey of Research and Development. In 2003, the industrial nomenclature of science and technology research survey was revised.

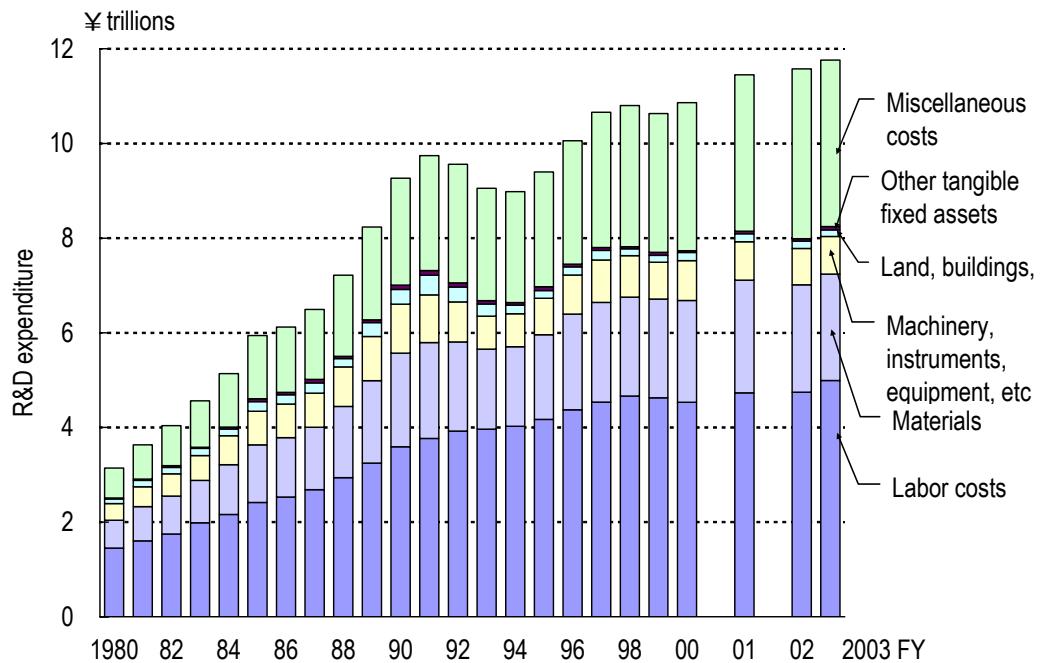

<Table D>1) Fiscal year basis.

- 2) The R&D expenditure deflator of 'enterprises' in the 'Report on the Survey of Research and Development' by Ministry of Internal Affairs and Communications.

(unit: million yen)

FY	Total funds paid outside companies	To enterprises	To universities	To public organizations	To private non-profit organizations
2001	895,988	751,118	71,966	7,643	65,261
2002	815,224	664,286	77,816	15,897	57,224
2003	1,079,096	923,284	83,430	13,849	58,532

Note: The data until FY2000:

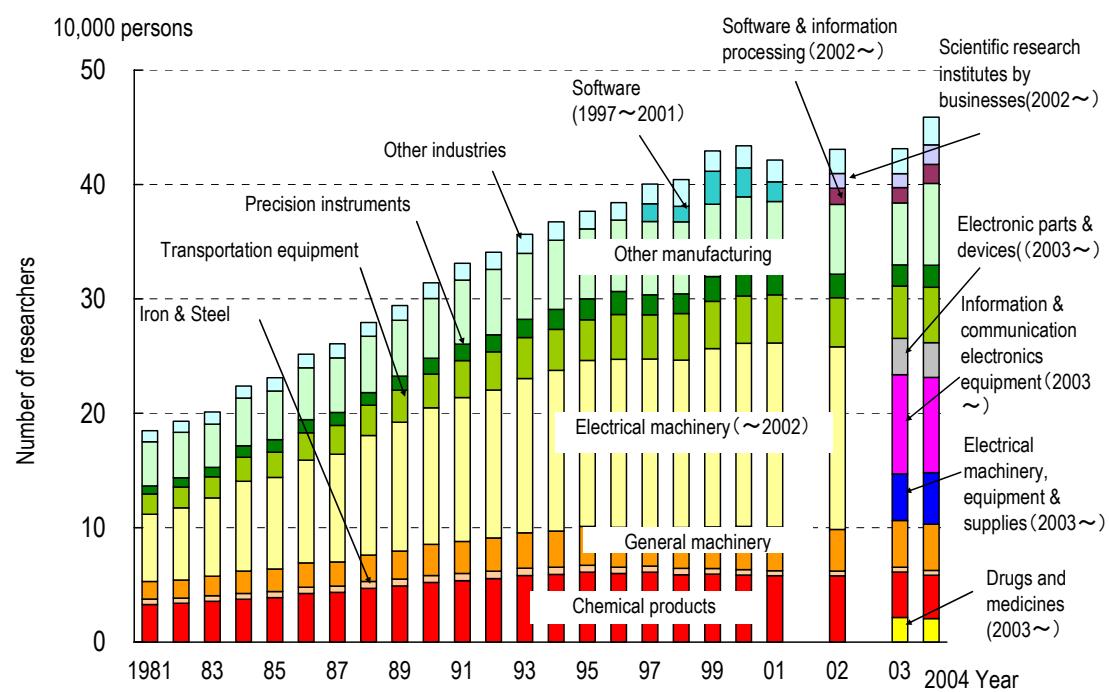

- <Private sector> 1) Companies, financially independent government-affiliated firms (private sector side) and private research institutes.  
 2) National/public research institutes: National/public research institutes and financially dependent government-affiliated firms (government/local public entities side).

The data since FY2001:

- <Enterprises> 1) Financially independent government-affiliated firms (private sector side)/independent administrative agencies.  
 2) In FY 2001, there were changes in the classification and addition of the industry sector in the Industrial Classification for the Survey of Research and Development.  
 3) In FY2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.

Note: The total for natural science and human/social science.

Until 2001: 1) Data show number of regular researchers.

2) Timing of survey is as of April 1st of each year.

After 2002: 1) The definition of 'researcher' was changed.

2) In 2002, there were changes in the classification and addition of the industry sector in the Industrial Classification for the Survey of Research and Development.

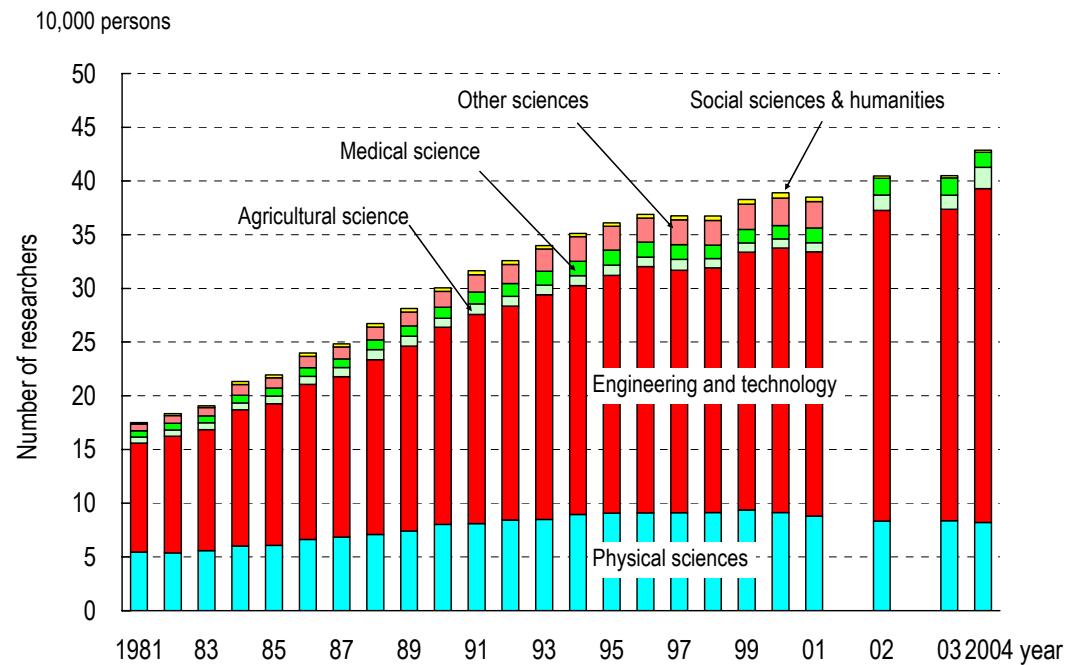

3) In 2003, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.

4) The data show number of researchers.

5) Timing of survey is as of March 31st of each year.

Note: <Until 2001>1) Timing of survey is as of April 1st of each year.

2) The data show number of regular researchers among researchers of research-related employees.

<After 2002>1) Timing of survey is as of March 31st of each year.

2) Data show real number (Head-Counts) of researchers.

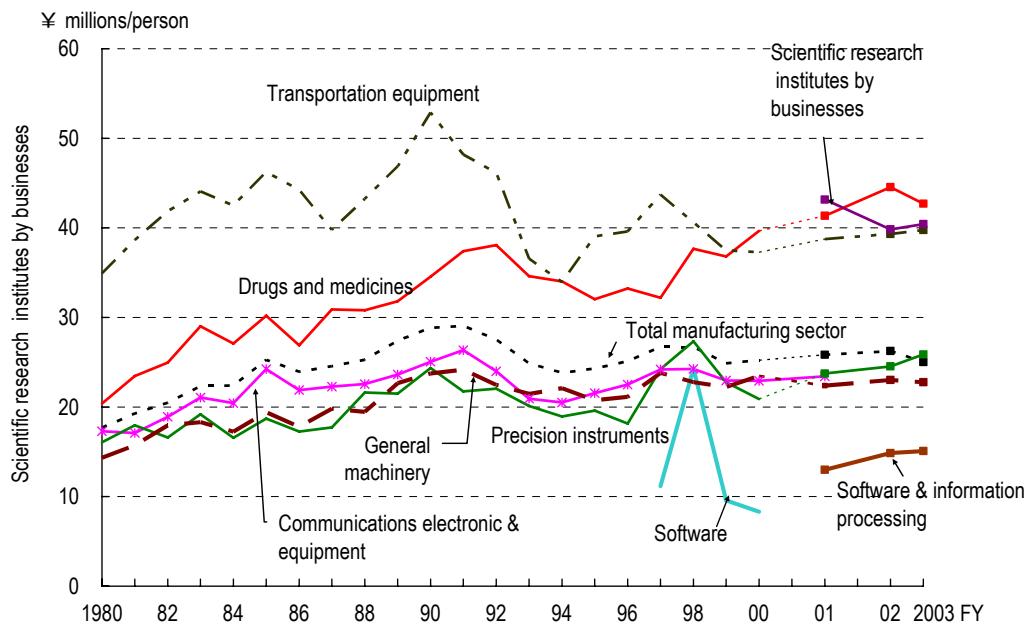

3) In 2002, there were changes in the classification and addition of the industry sector in the Industrial Classification for the Survey of Research and Development.

4) In 2003, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.

5) There is no other data for natural science.

Year	Manufacturing (continued)		Software	Software and information processing	Information & communications	(unit: 10,000 yen/person)	
	Transport equipment	Precision instruments				Scientific research institutes	Services
	Automobiles					Scientific research institutes	
2001	3,720	2,220	1,081	-	-	4,273	-
2002	3,827	2,355	-	1,129	-	-	3,874
2003	3,776	2,369	-	1,079	-	3,989	

Note: 1) Number of researchers is the same as Table 11-2-6.

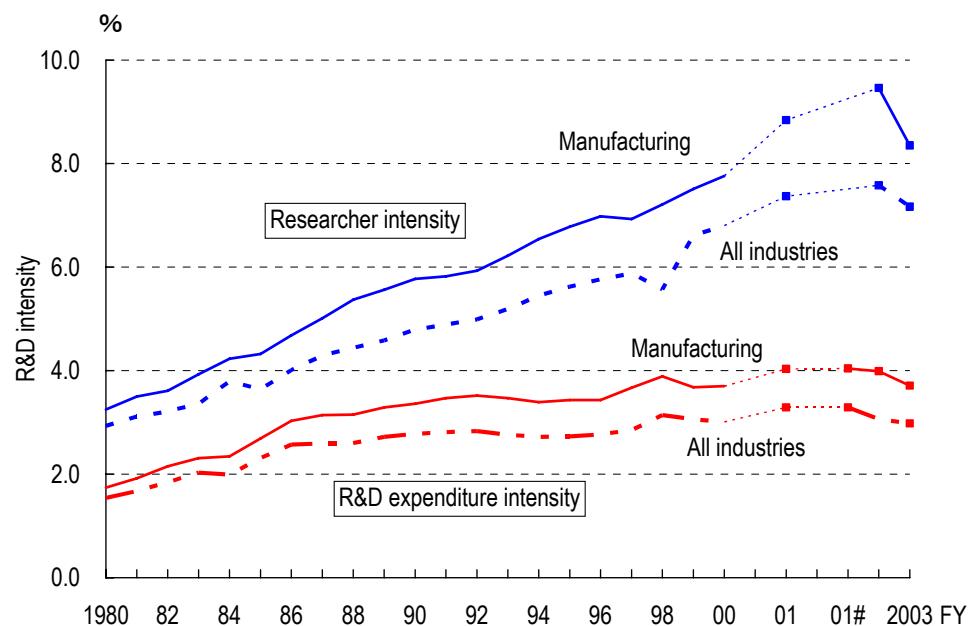

2) R&amp;D expenditure is the same as Table 11-2-1.

3)The research and development cost for one year of the fiscal year concerned was divided by the number of researchers of the time of a fiscal year (as of April 1), and the research and development cost was calculated per one person (the number of researchers of each year, and research and development cost of each fiscal year). After the 2001 fiscal year, the research and development cost for one year of the fiscal year concerned was divided by the number of researchers at the end of a fiscal year (as of March 31), and it calculated the research and development cost per one person.

Note: <Table A>

- 1) In FY2001, there were changes in the classification and addition of the industry sector in the Industrial Classification for the Survey of Research and Development.
- 2) In FY2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.
- 3) In FY2001 #, complied in accordance with the revised Japan Standard Industry Classification (March, 2002).
- 4) Excludes government-affiliated firm's until FY2000. After FY2001, excludes government-affiliated firms/independent administrative agencies

Note: &lt;Table B&gt;

- 1) Until FY2001, the figures are as of April 1st of each year. After FY2001, below the sign ◎, the figures are as of March 31st of each year.
- 2) As for the sign ◎ of FY2001, there was a change in the definition of 'researcher,' addition of a category in the industrial classification, and a change in the Industrial Classification for the Survey of Research and Development.
- 3) In FY2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.
- 4) Excludes 'government-affiliated firms' until FY2001. After FY2001, below the sign ◎, excludes 'government-affiliated firms/independent administrative agencies.'
- 5) 'H.C.' means Head Counts.

2001	398,377	300,418	2,149,940	11,023,000
2002	430,371	333,070	2,222,591	11,282,605
2003	422,449	389,758	2,175,343	11,099,975

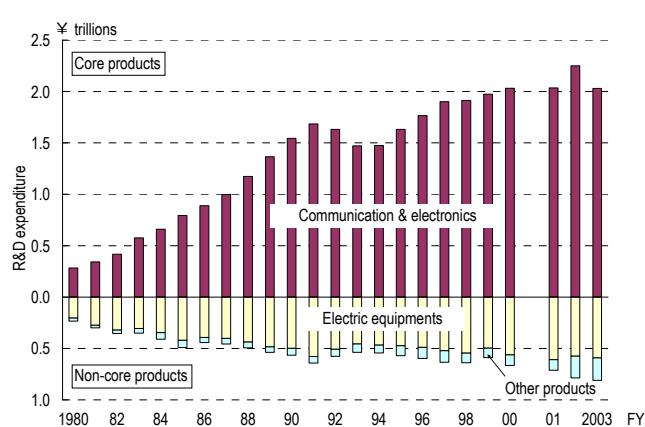

Note: The targets are companies (business enterprises after FY2001) with capital of not less than 100 million yen.

- 2) In FY2001, there were changes in the Industrial Classification for the Survey of Research and Development
- 3) In FY2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.
- 4) 'Electrical machinery and apparatus' is 'home electric appliances' and 'other electrical machinery and apparatus.'
- 5) After FY2001, Communications/electronics/electrical measuring instruments is 'Information-communications equipment/electronics parts.'

2001	161,622	29,587	14,862	227,020	3,320	35,551	471,962	
2002	180,365	24,791	9,897	191,744	-	34,313	441,110	
2003	201,273	2,810	11,794	213,559	-	36,907	466,343	

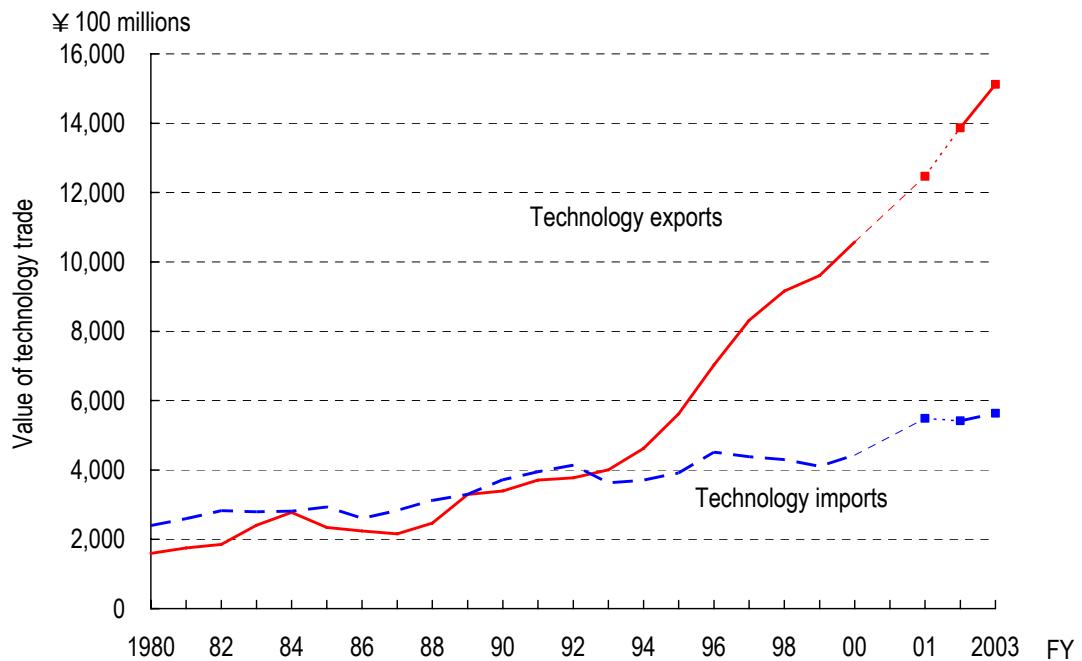

Note: The targets are companies (business enterprises after FY2001) with capital of not less than 100 million yen.

- 2) In FY2001, there were changes in the Industrial Classification for the Survey of Research and Development
- 3) In FY2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.
- 4) Along with these changes, industrial classification for FY2002 in this table represents the classification of FY2001 as follows.
  - D: Electrical machinery and apparatus ← 'Other electrical machinery and apparatus' in FY2002.
  - E: Communications/electronics/electrical measuring instruments ← 'Applied electronics/electrical measuring instruments' + 'Information-communications equipment' +'electronic parts/devices' in FY2002.
- 5) 'Electrical machinery and apparatus' is 'home electric appliances' and 'other electrical machinery and apparatus.'
- 6) After FY2001, Communications/electronics/electrical measuring instruments is 'Information-communications equipment/electronics parts.'

Note: 1) In FY2001, The industry classification for the Survey of Research and Development was revised, changing the coverage categories.

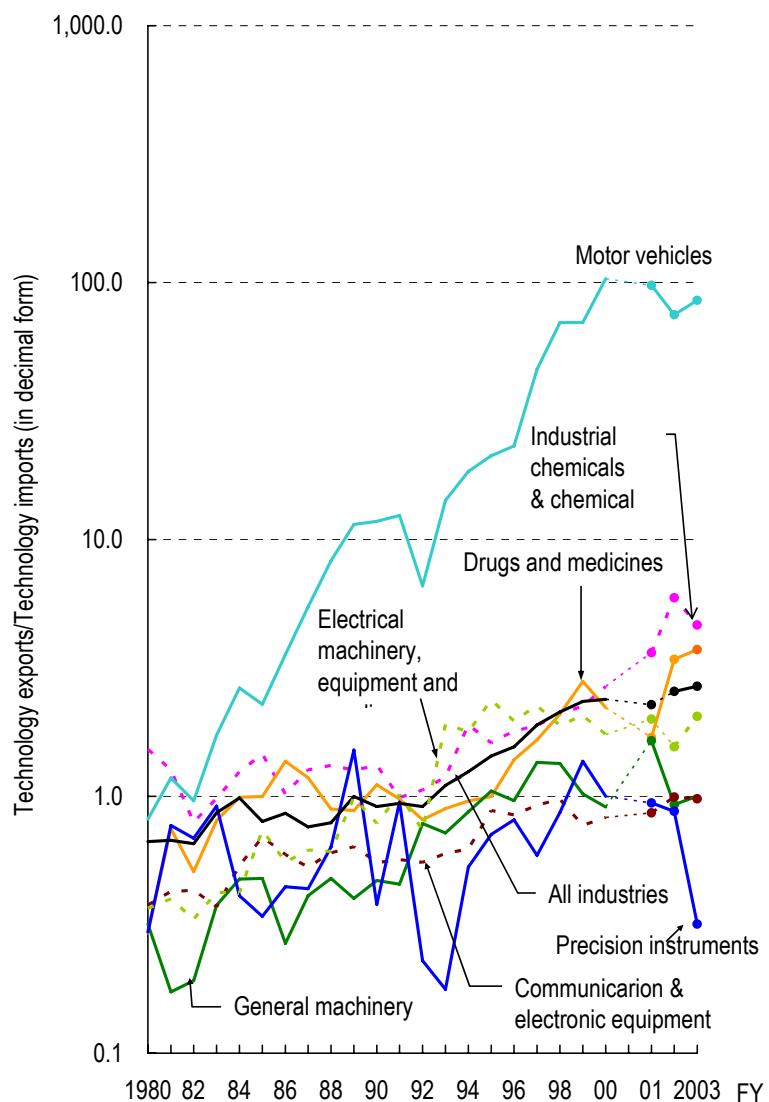

2) In FY2002, The Japan Standard Industry Classification and the industry classification for the Survey of Research and Development were revised.

'Electrical machinery, equipment and supplies' refers to 'miscellaneous electrical machinery, equipment and supplies.' 'Communication and electronic equipment' refers to a combination of 'electronic equipment and electric measuring instruments,' 'information and communication electronics equipment,' and 'electronic parts and devices.'

3) The data on the technology trade refer to patents, expertise, technical assistance, etc.

2002	1.12	0.96	1.01	85.31	0.32	0.62	2.68

Note: 1) In FY2001, The industry classification for the Survey of Research and Development was revised, changing the coverage categories.

2) In FY2002, The Japan Standard Industry Classification and the industry classification for the Survey of Research and Development were revised.

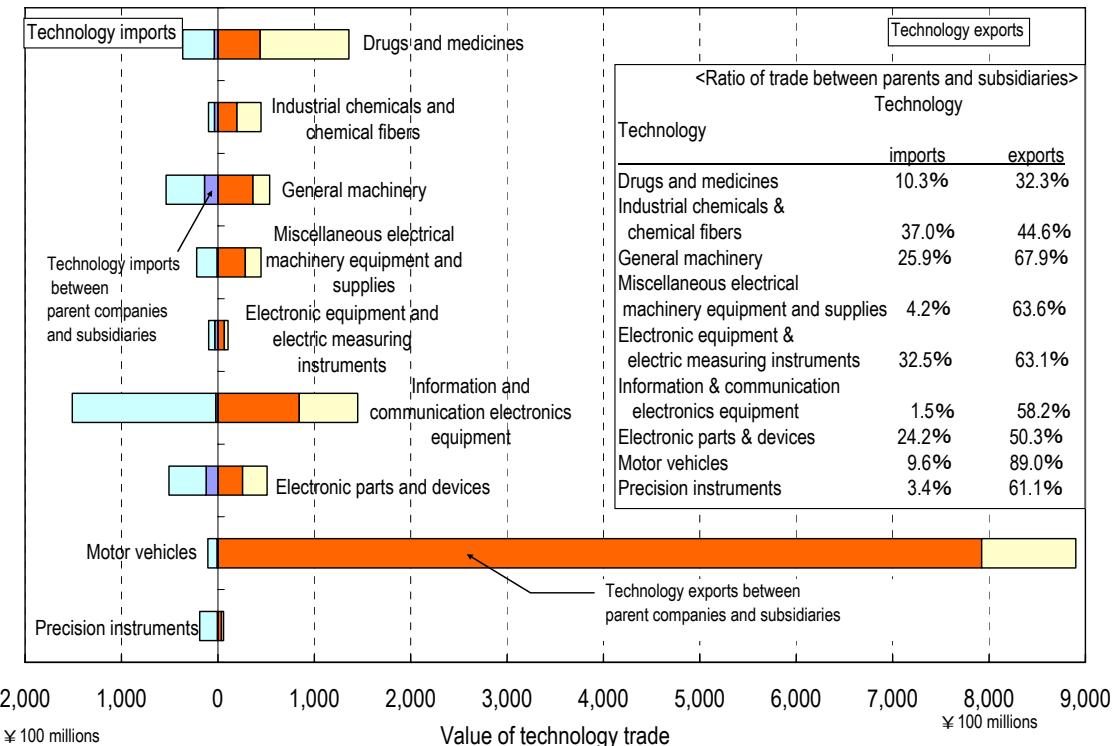

3) The data on the technology trade refer to patents, expertise, technical assistance, etc.

4) Technology exports to imports ratio: (technology exports) / (technology imports)

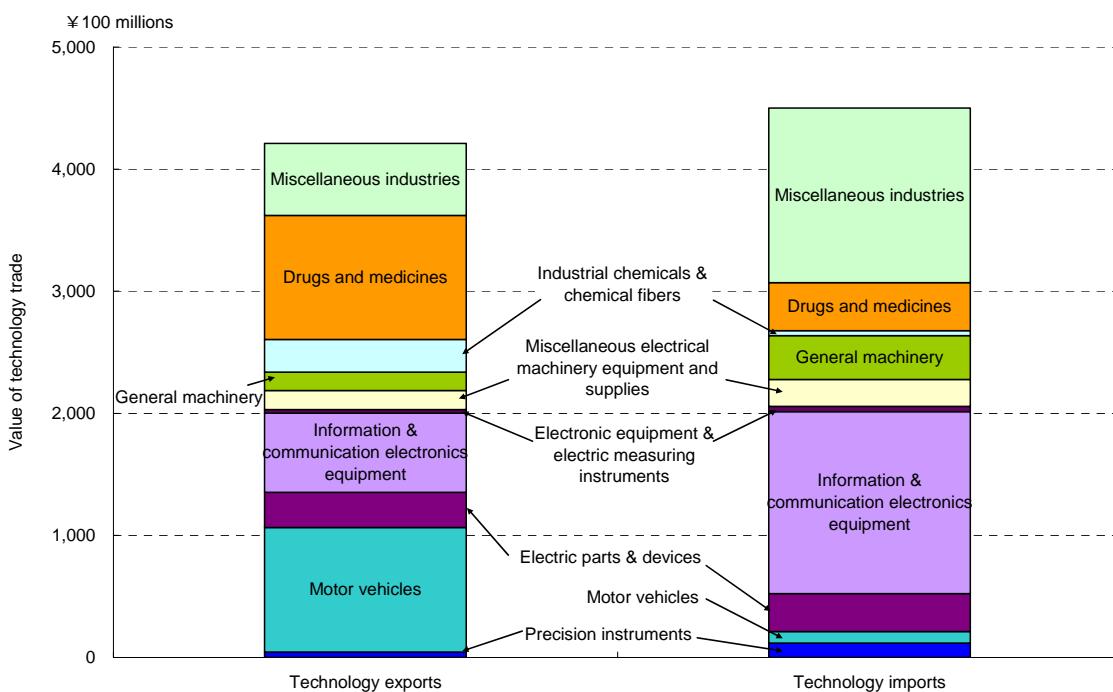

Source: Ministry of Internal Affairs and Communications, "Report on the Survey of Research and Development"

Figure 11-3-3: Comparison of financial relationships in technology exports and imports by industry

(A) Comparison of financial relationships (FY2003)

(B) Technology trade outside the parent and subsidiary relationship (FY2003)

See: Table11-3-3

**Table 11-3-3: Comparison of financial relationships in technology exports and imports by industry**

(A) Technology export

	(unit: million yen)	(unit: %)	
	Export value of technology	Parent-subsidiary companies' share	Capital ratio of parent and subsidiary
Drugs and medicines	135,912	43,873	32.3
Industrial chemicals and chemical fibers	44,758	19,946	44.6
Ceramics	11,398	9,038	79.3
Iron and steel	6,598	963	14.6
General machinery	53,766	36,507	67.9
Miscellaneous electrical machinery equipment and supplies	44,787	28,468	63.6
Electronic equipment and electric measuring instruments	10,621	6,698	63.1
Information and communication electronics equipment	145,051	84,432	58.2
Electronic parts and devices	51,060	25,706	50.3
Motor vehicles	889,981	792,318	89.0
Precision instruments	5,999	3,665	61.1
Software and information processing	3,116	2,633	84.5
Other industries	109,142	61,984	56.8
All industries	1,512,189	1,116,231	73.8

(B) Technology import

	(unit: million yen)	(unit: %)	
	Import value of technology	Parent-subsidiary companies' share	Capital ratio of parent and subsidiary
Drugs and medicines	36,460	3,753	10.3
Industrial chemicals and chemical fibers	9,649	3,566	37.0
Ceramics	715	117	16.4
Iron and steel	804	110	13.7
General machinery	53,669	13,926	25.9
Miscellaneous electrical machinery equipment and supplies	21,891	923	4.2
Electronic equipment and electric measuring instruments	9,466	3,081	32.5
Information and communication electronics equipment	151,130	2,192	1.5
Electronic parts and devices	50,726	12,262	24.2
Motor vehicles	10,432	999	9.6
Precision instruments	18,846	646	3.4
Software and information processing	45,410	11,835	26.1
Other industries	154,566	43,535	28.2
All industries	563,764	96,945	17.2

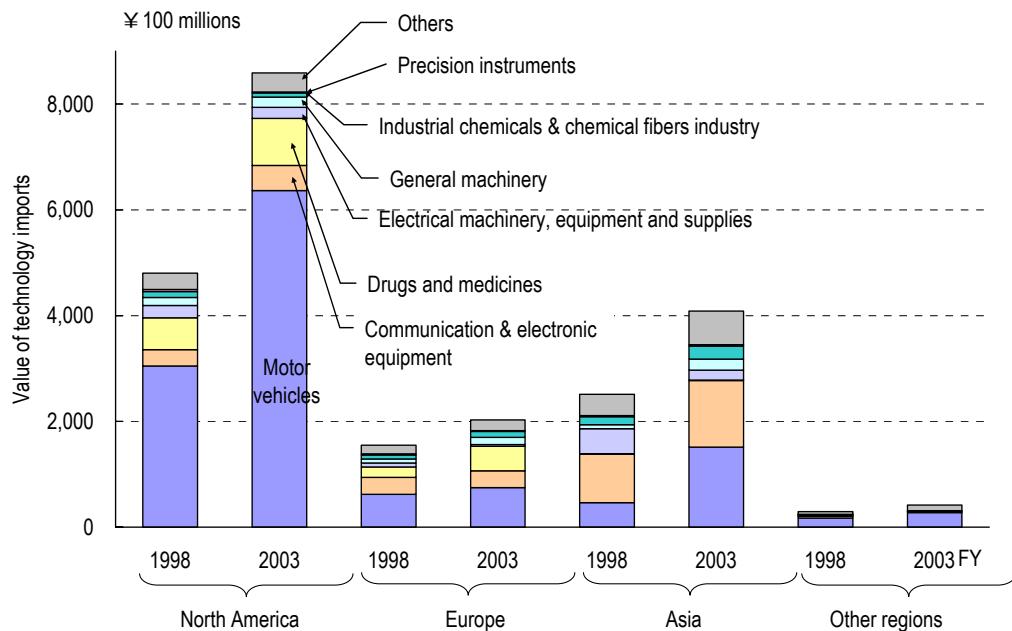

Note: The data on the technology trade refer to patents, expertise, technical assistance, etc.

A parent and subsidiary relationship is acknowledged when a business enterprise is more than 50% owned by another.

Figure 11-3-5: Comparison of the statistics on the technology trade in Japan

See: Table11-3-5

Table 11-3-5: Comparison of the statistics on the technology trade in Japan

(A) Trend in technology trade value in Japan (Statistics by Bank of Japan)

FY	Technology Export		Technology Import		Balance ratio
	Number of trade	Yen currency received (100 million yen)	Number of trade	Yen currency paid (100 million yen)	
1980	4,103	1,596	7,248	2,395	0.67
1981	4,877	1,751	7,207	2,596	0.67
1982	4,738	1,849	6,936	2,826	0.65
1983	6,403	2,409	7,839	2,793	0.86
1984	5,426	2,775	7,316	2,815	0.99
1985	5,885	2,342	7,679	2,932	0.80
1986	5,469	2,241	7,494	2,606	0.86
1987	5,955	2,156	7,373	2,833	0.76
1988	6,352	2,463	8,356	3,122	0.79
1989	7,559	3,294	7,109	3,299	1.00
1990	7,163	3,394	8,249	3,719	0.91
1991	8,063	3,706	7,409	3,947	0.94
1992	8,201	3,777	8,126	4,139	0.91
1993	8,338	4,004	7,724	3,630	1.10
1994	9,099	4,621	7,618	3,707	1.25
1995	9,073	5,621	7,712	3,917	1.43
1996	13,194	7,030	7,659	4,512	1.56
1997	10,008	8,316	7,888	4,384	1.90
1998	9,517	9,161	6,687	4,301	2.13
1999	10,958	9,608	6,386	4,103	2.34
2000	15,067	10,579	6,445	4,433	2.39
2001	-	12,468	-	5,484	2.27
2002	-	13,868	-	5,417	2.56
2003	-	15,122	-	5,638	2.68

(B) Trend in technology trade value in Japan (Statistics by Ministry of Internal Affairs and Communications)

FY	Technology Export		Technology Import		Balance ratio
	Foreign currency received (million dollars)	Yen equivalent (100 million yen)	Foreign currency paid (million dollars)	Yen equivalent (100 million yen)	
1980	378	817	1,439	3,112	0.26
1981	537	1,229	1,711	3,917	0.31
1982	527	1,315	1,796	4,481	0.29
1983	624	1,475	2,079	4,913	0.30
1984	693	1,692	2,317	5,657	0.30
1985	746	1,649	2,522	5,576	0.30
1986	1,009	1,613	3,375	5,395	0.30
1987	1,385	1,916	4,177	5,777	0.33
1988	1,681	2,156	5,076	6,510	0.33
1989	2,189	3,127	5,455	7,793	0.40
1990	2,582	3,647	6,004	8,481	0.43
1991	-	3,976	-	8,619	0.46
1992	-	3,995	-	8,899	0.45
1993	-	4,351	-	7,906	0.55
1994	-	5,427	-	8,561	0.63
1995	-	6,182	-	9,445	0.65
1996	-	7,562	-	10,967	0.69
1997	-	9,297	-	11,557	0.80
1998	-	9,530	-	11,862	0.80
1999	-	9,667	-	11,019	0.88
2000	-	11,881	-	12,180	0.98
2001	-	12,366	-	13,703	0.90
2002	-	13,907	-	13,705	1.01
2003	-	14,388	-	12,893	1.12

Note :< Table: A>

- 1) Before 1990, dollar base amount in the 'Balance of payments statistics' is converted into yen at the interbank central rate, fiscal year-end month average.
- 2) After 1991, the yen amount in the 'Balance of payments statistics' was applied, revised in January, 1996.
- 3) The data on the technology trade refer to patents, licensing fees for patents (loyalties for patents, rights of industrial property such as trademarks, mining rights, and copyrights, and loyalties under licensing agreements)

< Table: B >

- 1) Includes software industry for the year 1996-2000.
- 2) In FY2001, there were changes of the classification and addition of the industrial sector in the Industrial Classification for the Survey of Research and Development.
- 3) In FY2002, there were changes in the Japan Standard Industry Classification and the Industrial Classification for the Survey of Research and Development.
- 4) The data on the technology trade refer to patents, expertise, technical assistance, etc.

**Table 12-2-7: JICFS classification table (Divisions, Major groups)**

Divisions	Major groups	Note
Foods	Processed foods	
	Perishable foods	The items in this classification are included in the 'others' in this analysis because of the small volume
	Sweets and snacks	
	Soft and alcoholic beverages	
	Other foods	
Daily-use goods	Daily-use sundries	
	Pharmaceutical products	
	Cosmetics	
	Household goods	
	DIY products	
	Pet products	
Entertainment-related and productivity-related goods	Other daily-use goods	
	Stationery and office and information-related products	
	Toys	
	Books	The items classified in 'books' are very small in JICFS
	Musical instruments and sound software	
	Furniture	
Durable consumer goods	Automotive products and accessories	
	Furniture	
	Automotive products and accessories	
	Clocks and glasses	
	Optical and photograph-related goods	
	Household electrical appliances	
Apparel, personal articles and accessorized and sporting goods	Other durable consumer goods	
	Apparel and clothing	
	Bedclothes and bedding goods	
	Personal articles	
	Shoes and footwear	
	Sporting goods	
Other products	Other apparel, personal articles and accessories and sporting goods	
	Other products	The number of items may increase or decrease as some items may be re-classified into another category

Sweden	3.2	1.9								
Switzerland	2.0	0.3								
U.K.	3.0	2.3								
U.S.	4.0	3.6								

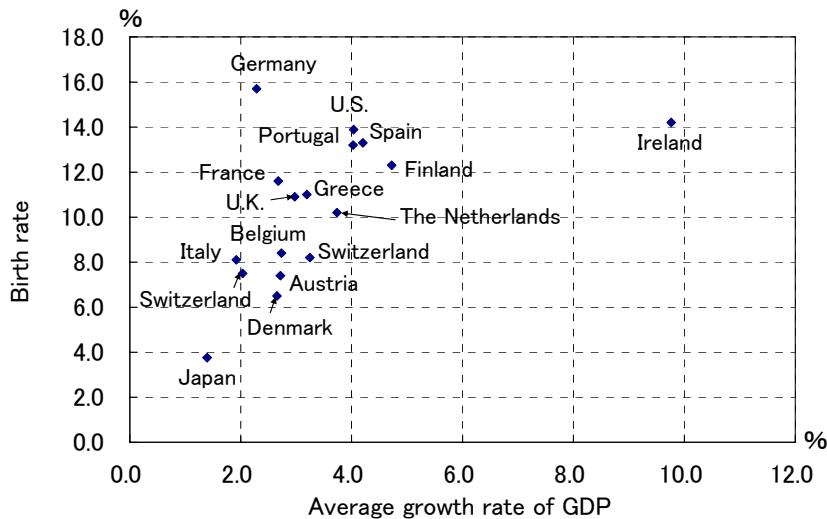

Note: 1) GDP of each country is in national currency on a 1995-base.

2) Average growth rate of GDP (1) is calculated as average growth rate of GDP(geometrical average) of 1995-2000. Growth rate for Denmark and Portugal are for the period of 1995-1998, Germany for 1997-2000, Greece/Ireland/U.K. for 1995-1999, Spain for 1996-2000, and U.S. for 1995-1997. This is to adjust to estimated period of average rate of establishing business of each country stated later in Table 12-3-1-4.

3) Average growth rate of GDP (2) is calculated as average growth rate of GDP (geometrical average) of 2002-2004.

Note: 1) The definition of high-tech industry complies with "2001 EVCA Yearbook" by European Private Equity & Venture Capital Association. Here, high-tech industry mainly includes information-communications equipment, Internet technology, computer hardware/software/services, electronics, semiconductors, biotechnology, and the medical equipment industry.

2) Investment ratio in high-tech industry = Investment in high-tech industry / total investment x 100.

3) Total figures may not be consistent because of rounding-off.
